1)	Cllr Charles Joyce KLWNBC Councillor South and West Lynn	<p><b>Consultee Comment</b> To EDT Committee: States 'today' Wisbech Road King's Lynn had long queues of traffic due to a need to stop at traffic lights where Wisbech Road crosses Harding's Way which is a regular event every morning during the week when workers and shoppers travel into the town centre. Adds, at present the long queues are due to buses wishing to enter Wisbech Road from Harding's Way. Thinks opening Harding's Way to other than pedestrians, cyclists and public transport will make these queues significantly worse. Continues that evening traffic leaving King's Lynn via London Road and heading West is often queued back to the Southgates Roundabout due to buses leaving Harding's Way.</p> <p><b>NCC Officer Comments</b> The proposal will not affect the existing bus service. Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process.</p>	18 May 2018
2)	Jonathan Toye WNDiS (West Norfolk Disability Information Service) 14 Tuesday Market Place King's Lynn Norfolk PE30 1JN	<p><b>Consultee Comment</b> Would like to express concern about the proposed changes to Harding's Way which would mean that the use of this route would change drastically with detrimental effect for many members of the community. Since its establishment, Harding's Way has provided a safe route for pedestrians of all ages and levels of mobility. Many school children and their parents use it through the week to go to and from Whitefriars School. (At a conservative estimate around 100 – 150). Says it is a safe route also for cyclists and for disabled people either on foot or using a wheelchair or mobility scooter. It is of course also a highly efficient 'bus route with no other vehicular obstructions. It would seem a particularly backward step to jettison this safe, effective corridor from South Lynn – an area which is undergoing increasing development, with more families moving in – to the town centre. States, surely we should be creating more of these routes rather than changing them for the worse? The alternative route for all the users above is London Rd, which in contrast is often subject to traffic delays and is a very dangerous route for those individual users. The draft Equality Assessment mentions the problems that visually impaired people might experience with the proposed changes. Feels this statement does not go far enough. Anyone with limited mobility or who is pushing a child in a buggy or pram, any cyclist, any pedestrian who does not have their wits about them, will experience problems with this additional traffic use. Would urge to think again before sacrificing this wonderful asset.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Harding's Way. However, it is only likely to have a significant detrimental impact on disabled pedestrians – specifically blind and visually impaired people, people with multi-sensory impairments (e.g. people who are blind and deaf), and people with mobility impairments. This may include older people, who may not consider themselves disabled, but whom have age-related health conditions or mobility issues that affect their ability to get about. Recommendations are made in the EQA report for amendments to the design to lessen the impact for consideration by the Committee. 18. These accessibility considerations will make it comparatively easier to use the proposed crossing point than many others in the area. This is important to note, because in order to arrive at Harding's Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Harding's Way.</p>	30 May 2018
3)	Jane Dearing The Harding's Pits Community Association Ltd	<p><b>Consultee Comment</b> Whilst does not object to moving the bus bollards to accommodate the necessary improvements as indicated by the plan, are concerned that the plan does not faithfully represent the site meeting promise by NCC officers to erect a strong barrier as a deterrent to unauthorised vehicles along the boundary edge of the Pits adjacent to the works. Says 'you will recall our previous letter, to Mr McCabe, of objection dated 11th July 2017, where we stated quite unequivocally, and in detail, our objection to opening up Harding's Way to all traffic. Our objection still stands and is no less diminished for the passing of 11 months'. Adds, 'It is regrettable that he did not reply nor acknowledge our letter, so in the current climate whereby this painful subject is being raised again, we must again write to register our deep concern and objection to the opening of Harding's Way to all traffic, should this be mooted in the future'. Says the reasons they are objecting are not based upon a sense of entitlement that nothing should be done in their back yard, no that nothing should be done to resolve the problem of air pollution levels along a small stretch of road running through the town in London Rd, the reasons why they object to this proposal are that it is a disproportionate response that will blight a significant area of the town. Our objection is also informed by the fact that we were promised faithfully many times by senior NCC officers that opening up the road to all traffic would never happen. Adds, presently there are two points along Harding's Way where vehicles cannot pass one another. A blind bend is one. The land at this points may not be widened due to the fact that there is the river on one side and the land on the other side is privately owned and ownership has defeated the Borough Council when they sought to compulsorily purchase. The second part of the road where there is a single carriageway only is across the river Nar. On one side is the river itself, and on the other is the river Ouse. Unless you plan to demolish the crossing and rebuild at this point, and pile into the mud along the Ouse side to create a wider road, traffic will have to be held up by traffic lights to filter movement. Hardly the seamless and ideal solution to creating an alternative route, is it? How will you devise a method to prevent impatient motorists from jumping the lights, with the attendant risk that due to the proximity of the school and local residents, injury may be sustained? The Environment Agency have already stated that they will not give permission for the flood bank to be eroded to create extra width, so Harding's Way will always be a slow route into town for heavy traffic. Harding's Way is a key part of the National Cycle Network (Routes 1 and 11, <a href="https://www.sustrans.org.uk/ncn/map">https://www.sustrans.org.uk/ncn/map</a>). The National Cycle Network is a government supported scheme to link every town by a traffic free route. Says if Harding's Way as a traffic free route is destroyed County Council will be under an obligation to create an alternative, but every other alternative in existence already has traffic, so how will the network be kept continuous? In 1999, when the bus only route of Harding's Way was proposed, Norfolk County Council made repeated assurances that it would not be open to all traffic, stating, 'An all-vehicle through route from Wisbech Road to Stonegate Street would not be supported' (recorded document referring to the Nar Ouse Regeneration Area). If Norfolk County Council wasn't disingenuous when it made that assurance, where is the integrity of Norfolk County Council now? There is widespread public opposition to opening up Harding's Way. A Borough Council consultation showed that 77% of respondents were opposed to the proposal. (Option 3, Riverfront Delivery Plan Final Options, pp36 – 65). In the face of the evidence of such widespread opposition, what is the democratic mandate to go against the will of the public? Harding's Pits isn't an arbitrary piece of waste ground. It originated as part of a central government scheme to provide 'Green Lungs' for urban communities that lacked essential facilities. The scheme was known as Doorstep Greens, and is the only area of public open space serving the growing and revitalising community of South Lynn, and provides a green bridge between South Lynn and the town. Subsequently, Harding's Pits has been audited and found to be a repository for a vast biodiversity of life, most of which only exist because of the absence of traffic. In 2008, Norfolk County Council applied for funds under the Community Infrastructure Fund (CIF) to "improve public transport into King's Lynn". The bid document reads "this scheme will provide for a congestion free bus lane and improved bus journey times and reliability. This will contribute to improvements in air quality by reductions in congestion and the re-routing of buses. It will also contribute to modal shift by providing better cycling and pedestrian provision as well as improved bus services". States if Norfolk County Council, under pressure from the Borough Council, resiles from Hardings Way being continuous under the provisions of the CIF Bid, then Norfolk County Council are obliged to repay the money granted under the terms of the bid back to the government in their entirety. Currently, Hardings Way and Hardings Pits serve as a safe, traffic free, route for children in South Lynn attending schools in town. Opening up Harding's Way to all traffic will change that. Is it really the intention of Norfolk County Council to lower pedestrian safety standards? Research demonstrates that creating roads does not diminish traffic, but increases it. Build a road and people will use it. Instead of lessening the traffic into town, adding another route into town will merely increase it. Any lightening of traffic on London Road as a result of opening up Harding's Way will be perceived as a reason why people should drive to town instead of using public transport. Consequently more traffic will enter town, and in no time at all, the volume of traffic using London Road now will be the same, but it will all move more slowly because it will join up further on in town with traffic along Harding's Way. The natural conclusion is that even more traffic will be trying to enter and exit town at the same congested point of Southgate roundabout. Opening up Harding's Way will make</p> <p><b>NCC Officer Comment</b> NCC have given Harding's Pits Community Association their commitment to replicate the current fencing arrangement should the approved works go ahead, due to the concerns raised at the site meeting. Further to that commitment, NCC will ensure that any temporary arrangement during construction will ensure that the security of Harding's Pits is maintained. The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Improved cycle and pedestrian paths separate to the main highway could help as in some cases pollution levels can drop quite quickly as distance increases from kerbside. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving. The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The approved scheme which relocates the bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north towards Hardings Pits is maintained. Apart from the relocation of fencing, there are no proposed works in the immediate vicinity of Hardings Pit that would affect the green space and wildlife. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal.</p>	08 June 2018
		<p><b>Consultee Comment</b> <u>To Alexandra Kemp:</u> I am in receipt of your communication concerning the road structure around the Friars Area. Firstly, if you are fully aware of the situation, you will remember that I, on behalf of the school, sent a fair letter to the Borough Council outlining the issues that affect us directly. I received a fair reply from them, especially Alistair Beales. Secondly, I was a little displeased about the way we were referred to in a recent press release in which we were quoted as having 120 pupils using Hardings Pit as a way to school. Where was this information accessed from? Thirdly, I have a concern about the mention of a previous Head Teacher and a promise that was made to him about the area. I do think that there needs to be a certain caution about using our school in a manner such as this in the local press. However, the traffic situation in King's Lynn, I agree is very congested at certain times of the day. I have tested out the route recently with the changes made expecting the worst but it was actually no worse than usual. I can appreciate that there is a lot of strong feeling about the situation from local residents. This will always be the case when changes are made. The opening of Hardings Way is only one issue. There are other roads in the vicinity around Hillington Square that could be opened to give access to traffic flow thus relieving the demands on London Road. I am aware that opinion on this matter is divided locally. Actually, for us, the traffic and parking in the Whitefriars area is far more dangerous and a pressing issue for us. When there is a lack of free flow traffic, which is then encapsulated in dead end roads, of course there will be traffic build up and congestion creating danger for our children. Have you been to the School at the start and end of the day? Our major objections to the plan, initially, were centred around the health and safety of our children. Whatever the outcome. Our children must have a safe and properly managed route to school. If the roadway was opened to car traffic as a route into the Town Centre it must be properly served with a safe, light controlled crossing near to the school. This should also have barriers of sufficient length to ensure safety at the crossing and a time span long enough for the children to cross the road. I feel cars would be a better option than buses and lorries which could hopefully flow more easily along the roads as now, (London Road or the By pass). If the traffic was then diverted back on to London Road via Stonegate Street and the Mill Fleet, access would join a two lane carriage way and hence, as now proceed into Town. There are good crossing points here. Traffic should not be encouraged along the River Front. Somewhere in the vicinity of the School there should also be a proper and protected area, at no cost, where parents could safely drop their children off for school if travelling by car. This would alleviate some of the traffic that currently uses Vallingers Road for access and hence relieve a serious point of danger. We also need a safe area where Coaches can pick up and drop off our children when they are scheduled for school trips. If you refer to my previous letter you will have noted that my other concern is for air quality for the children, especially in the summer months when classroom doors are open and the children are spending many hours of their learning in an outdoor environment. Noise from a busy roadway would impinge upon quiet time necessary at exam time and before. Also, our children always play outside at Break and Lunch Times and for some this is the only outdoor space they have in which to play. Our Reception children need a great deal of time outside. Interacting in a playground about air quality and pollution is just</p>	

4)	<p><b>Jilian Hemmings</b> Chair of Governors at Whitefriars Primary School</p>	<p>testing. Also, our children always play outside at break and lunch times and for some this is the only outdoor area they have in which to play. Our reception children spend a great deal of time outside. Interestingly a new study about air quality and pollution is just being given public viewing time on the News this week. (Luton) Schools and children are being studied for 4 years and tested for the effects of pollution. I do feel that with extra building work scheduled for the area the traffic flow problems will only increase and we may wish that the topic of discussion now was allowed if we press for it to be shelved. Really this is not just about the opening of Hardings Way. The whole planning process needs attention. Infrastructure needs care. Building projects will always attract HGV traffic which will need access to the building site. Car parks are rarely on the edge of the Town thus forcing traffic into the centre. A massive difference was made in Cambridge with the introduction of Park and Ride Schemes. In the Hills Road and Regent Street areas of the city air quality changed considerably. However, a GOOD bus service, and parking areas are necessary for this to happen and to link up to major services in the town (bus and train stations, shopping centre). In writing this to you I must add that I was brought up in a London Borough. Schools and Parks were always near busy roads. The roads were always busy. There were conservation areas. It is the safety measures around the environment and the planning of building developments which need the utmost care.</p> <p><u>To Oslap Paparega:</u> I am writing in haste to express my opinion, as Chair of Governors at Whitefriars Primary School, about the recent meeting content and press release regarding the development of the Hardings Way Bus Route which runs along the Boal Quay area and adjacent building project that is being considered at this current time. I have been alerted to the fact that there is a meeting tomorrow at which this is being considered again. The School is just a short distance from the road and the area which is intended for development. I ask you to consider, seriously, the Health and Safety aspect of your proposals and the impact it will have on the school and children. We have a relatively open site which has many benefits to the children allowing them to enjoy their play times and play areas and this is beneficial to their health. We object to the area becoming an open and busy roadway which will inevitably bring polluted air and noise into our site. The volume of traffic that will build up at times during the day will have an impact on the life in the classroom bringing unwanted noise and pollution to lessons particularly during the Spring and Summer months when classroom windows and doors will need to be open to allow fresh air into the rooms and for the times the children enjoy at their picnic site for lunch. Children's ability to concentrate at vital times of testing will be compromised by the constant noise of passing traffic. We try very hard to make our school safe and healthy for our very vulnerable children. We are very aware of traffic safety around the vicinity of the school which is already highly dangerous. Our children are young and opening the roadway to all vehicles is obviously going to have a significant impact on the journey to and from school for many of them. I was unable to attend your meeting last week so am unsure of all the details, but have you thought about and planned for necessary pedestrian crossings and safe crossing places for parents and children? I have, in my time as a teacher at a different school, sadly witnessed the death of children who needed to cross busy roads with heavy and large vehicles where there has not been a safe place to cross. Children do not have the same awareness as adults for road safety no matter how much advice they are given. Do you honestly wish to have the death or injury of a child or children on your conscience merely because it is not safe for them to travel to and from school by foot or by cycle? I hope that you will at least consider the content of this letter and add it to your objections for your proposals for the development of this area. I know I am not the only adult voicing my concerns here and am alerting you to the voice of all members of the staff and governors at the school who have the well being, health and safety of the children at their heart.</p> <p><u>Additional Comment:</u> States there will be no further correspondence regarding this issue having taken advice from other trust employees. Says it might be good to withdraw comments.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving.</p>	
5)	<p><b>Cllr Charles Joyce</b> KLWNBC Councillor South and West Lynn</p>	<p><b>Consultee Comment</b> Based objection to opening up Hardings Way on 6 factors. Says Hardings Way is a route in King's Lynn that links the Boal Quay to Wisbech Road. Wisbech Road runs from a T junction with Clenchwarton Road through to the Southgates Roundabout which is the junction of Wisbech Road, London Road, Nar Ouse Way, Hardwick Road and Vancouver Avenue. Along the route from Clenchwarton Road to the Southgates Roundabout Wisbech Road has a painted mini roundabout junction with Saddlebow Road. Where Hardings Way joins Wisbech Road is a 4 way traffic lights. The 4th road at the traffic lights is the access to Wisbech Road from the Nar Valley Park housing estate which is in the process of being built.</p> <p>1) Tim Edmunds, a senior highways engineer with many years experience for Norfolk County Council, has made it crystal clear, in writing on behalf of NCC, he believes it is unsafe for Hardings Way to be opened up to traffic of any kind other than pedestrians, cyclists and public transport. Assistant Director of Planning and Transportation at NCC, John Joyce ( no relation ) did not disagree. It has been suggested that Mr Edmunds intended his comment to be confined to network in that the bus gate should not be removed, but not that general traffic, including HGVs, should not be allowed to access Hardings Way. However, no evidence has been produced to substantiate such a claim. In addition if that is what Mr Edmunds intended to be understood from his comment, it is abundantly evident that the present traffic regulation order was not necessary, because the bus gate physically stops through traffic, other than public transport, traveling along Hardings Way from Wisbech Road to Boal Quay. Therefore, the only logical conclusion to draw from Mr Edmnds comment is that the present traffic regulation order should not be amended.</p> <p>2) The advice given to the Planning Committee of King's Lynn and West Norfolk Borough Council by the local office of the Highways Department is at best inconsistent. For example, Poppyfields is a housing estate that accesses the main highway at Clenchwarton Road. When this went forward as a planning proposal No Objection was raised by the local Highways Department, and no recommendation for a controlled crossing to allow pedestrians to cross Clenchwarton Road in relative safety. It has now been publicly acknowledged that a safe crossing should be a requirement of any future housing development that accesses the highway network via the western side of Clenchwarton Road. When the Planning Committee of KLWNBC deliberated over the planning application of KLWNBC which triggered the consultation being undertaken there was No Objection from the Highways Department. The official from the Highways Department attending for other agenda items prior to the KLWNBC application left the meeting and was therefore not available to comment on matters which arose at the meeting. It is at this stage no more than conjecture to suggest that the reason for him leaving was due to the agent for KLWNBC was a named official of the Highways Department. It is, nonetheless, difficult to see how the Highways Department was not compromised in acting as the agent for an applicant, along with acting as independent consultant to the planning authority, and later as the regulator.</p> <p>3) One issue that arose was that of Acacia Waste planning application near Downham Market. It is my understanding that the then owner of Acacia Waste was Mr A.M. White – not the Australian company of a similar name. Mr White had applied and been granted planning permission for "Change of use of chicken sheds to B8 ( wholesale warehousing and distribution centre ) use". Case No 2/4/00966/F. The site was Mast Farm. New Road, Crimplysham. Importantly there was no limit of traffic movements nor numbers. Nonetheless the local Highways Department raised No Objection. The Planning Committee of KLWNBC granted planning permission with no restrictions of vehicle movements on 26 July 2004. Whereas when Mr White applied for planning consent for a "Recycling yard for reusable materials" at the same site. Case C/2/2004/2009. This application was refused by the Planning Regulatory Committee of NCC on 16 August 2005. Although the applicant had agreed to restrict vehicle movements this was seen as an intensification of an existing access onto a corridor of movement ( A1122 ). This intensification of use would lead to a deficiency of the through road to the detriment of highway safety, contrary to NCC policies Structure Plan T11, and KLWNBC Plan Policy .9/11. The highways engineer advising the NCC Planning Regulatory Committee was Tim Edmunds – the same highways engineer who said Hardings Way was not safe to use for traffic other than pedestrians, cyclists and public transport.</p> <p>4) From the evidence of the planning applications of Mr White there appears to be a direct conflict between NCC senior highways engineers and local highways officers. Where highway safety improvements have been introduced locally at times their success has been suspect. Even where they have been excellent the local Highways Department have sought to make them ineffective. One instance was a link road between Saddlebow Road and Nar Ouse Way had a traffic calming measure which even joyriders observed. The scheme was a temporary measure. When the local Highways Department sought to remove the measure it was fiercely opposed by local county councillors, including the then county councillor for the division Mrs Judith Brown. The outcome was to alter the traffic calming measure which although in no way as good as the temporary measure, it still did have some effect. A new safety measure was introduced at the junction of Clenchwarton Road and Wisbech Road. The result was to substantially increase accidents at this junction to almost daily basis. It was not removed until there was direct involvement from the then Leader of NCC, and the present Deputy Leader of NCC. The accident rate dropped upon removal. With the present proposal to amend the TRO in place on Hardings Way there seems to be a lack of knowledge of the situation on the ground. Already there are queues of traffic stretching the full length of Wisbech Road. Similar queues of traffic occur on Nar Ouse Way and Hardwick Road as traffic attempts to enter King's Lynn. As a consequence there is no or little opportunity for traffic to find an alternative route into King's Lynn. This is particularly prevalent at peak times when commuters are travelling into work. But these queues are not exclusive to commuters entering King's Lynn. As the Nar Valley Park is developed this congestion and gridlock can only worsen with traffic from the housing development seeking to enter the highway network at the traffic lights on Wisbech Road at the junction with Hardings Way. Therefore any further traffic emanating from Hardings Way will worsen the situation to the detriment of the highway safety. Additionally, it is already the situation that traffic leaving King's Lynn via Wisbech Road are held up by buses leaving Hardings Way. At times this can cause gridlock on the Southgates Roundabout which imposes restrictions on traffic seeking to leave King's Lynn via other routes. With the development of the Nar Valley Park estate this will worsen. To further worsen the situation by adding additional traffic from Hardings Way is not logical if the aim is to at least maintain highway safety at it's present level.</p> <p>5) As the gridlock at the Southgates increases the noxious gases emitted from vehicles will worsen due to idling engines. While a primary reason for Hardings Way was to have a safe route into King's Lynn for pedestrians and cyclists, another reason was to remove buses from London Road due. As more traffic seek to enter the highway network at the traffic lights on Wisbech Road the gridlock will worsen with a resulting increase in environment damaging gases on London Road and Vancouver Avenue. Yet one of the reasons for Government support for the building of Hardings Way was to improve the environment on London Road. Should the county council amend the TRO will it repay the £1.8 million to the Government for reversing the environment improvements that removing heavy diesel buses, and the consequential reduction in pollution, from London Road produced?</p> <p>6) There is a suggestion that a private easement exists across the route of Hardings Way. If this is true does it include vehicular rights of way of modern day standards up to and including heavy goods vehicle? And if it were to be true why was this access not include in the original TRO on Hardings Way? The only logical conclusion is that any easement does not include vehicular rights of way.</p> <p><b>NCC Officer Comments</b> An NCC officer did previously state that he believed that it would be unsafe for Hardings Way to be opened up to all traffic. Although we are not able to prove definitively in either way, we are confident that those comments were made in connection to crossing of the River Nar at the existing sluice along Hardings Way. It is not possible for two larger vehicles to pass safely at this point due to the restricted width, proximity of the structure and alignment, therefore completely opening Hardings Way to all traffic (without any restriction over the sluice) between Boal Quay and Wisbech Road with its current alignment would not be achievable. However, this proposal does not seek to open the full extent of Hardings Way to all traffic, so the historical comment is not in keeping with this proposal. Previous planning decision made by the LPA are not relevant to the proposed amendment of this Order. Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving.</p>	11 June 2018

6)	<p><b>Cllr Alexandra Kemp</b> County Councillor Clenchwarton and King's Lynn South</p>	<p><b>Consultee Comment</b></p> <p>Dear All, Please see my formal objection below as the Local Member. There is opposition registered against this Traffic Order from nearly 70 people including Government Agencies including a Disability Specialist and I will be speaking as the local member at the EDT Committee on 6 July. There is also the online 38 degrees Petition with 800 signatures. It is an issue of great controversy and there has been a Vigil and a Community Walk against it. Why does this Order place 7.5 tonne lorries onto Hardings Way, with the new road access to Overtons "wide enough for the largest HGV's", like the lorry pictured below at Overtons Coachworks last week, at the very time we are trying to keep 7.5 tonne lorries off Wisbech Road and when we have set up a Vehicle Watch to do so? This Order creates conflict with buses, pedestrians and National Cycle Lane 1 and the Children's Safe Route to School. There are new material planning considerations, including heritage assets and archaeology to consider, this Council's Core Strategy, Open Access Plan and Cycling and Walking Strategy. Traffic to and from Hardings Way South will be trapped in at point of entrance and egress onto the highway when it frequently queues back to the South Gate and the Freebridge. This is an intensification of use on a corridor of movement designed to speed up public transport and reduce congestion and this Order is against highway safety and must be refused. 7.5 tonne lorry at Overtons Coachworks which proposed Traffic Order would allow onto Hardings Way (Photo attached)</p> <p>As the local County Councillor, I object to the Hardings Way South Traffic Order: because of the strength of opposition in the Borough, the matter has been referred to the Environment, Development and Transport Committee for determination on 6 July :-</p> <p>1. As a result of the Vigil at the Quaker Meeting House in Bridge Street, next to Hardings Way, on 12 May, 56 Handwritten letters of objection have been written; a Community Walk of 50 people along Hardings Way including buggies, prams and cycles was held last Summer, and there are 800 signatures to the online 38 degrees Petition Against Opening up National Cycle Route 1 on Hardings Way South to general traffic. West Norfolk Disability Information Service has placed an objection about the detrimental impact on families, children and disabled people in buggies, following a safety audit in May 23 and visit to Whitefriars School. Equal Lives had not provided a response, as statutory consultees, due to the loss of their Lynn Team due to funding cuts. Natural England, Sustrans and the Campaign for Rural England are against it and the Committee must take note of this. Families with children that use Hardings Way, as their Safe Route to School, grandparental carers taking children to school, disabled people in buggies, mobility-impaired, partially sighted people and asthmatics, including residents of the Hardwick Road Bridge Caravan Park for the over 55's, have all written letters of objection on the grounds that Hardings Way is their only safe route into town from South Lynn, because the busy side roads, sloping, narrower and frequently blocked pavements on neighbouring London Road, make it too dangerous for them to use, but this Traffic Order would substantially lessen Hardings Way safety and provide a severe detrimental impact on vulnerable users. Hardings Way is a futuristic single-track highway for buses, cyclists and pedestrians only and is unique in Norfolk. It is the National Cycle Route 1 and is frequented by international cyclists and tourists. It is a reason to come to Lynn as its traffic-free nature gives it a quiet, calm and safe feeling and atmosphere.</p> <p><b>FANTASTIC SCENIC ROUTE</b></p> <p>Hardings Way runs from South Lynn in the south, north to the historic medieval town centre of Lynn that was founded around 1090 and provides a fantastic scenic route by Hardings Pits to the west, the Doorstep Green, that runs along the historic River Ouse, the gateway to the Wash, the largest estuary in England, and to the east along the picturesque entry to the historic Nar Ouse Valley. This is of County Wildlife Site Quality. Along this route is the designated safe route to school for Whitefriars School A wide pavement, suitable and safe for buggies and prams runs along the west side. In Medieval Times, the Nar was navigable to Castle Acre and the route of choice to Walsingham. Hardings Way has historically been a walking and cycle route and a buffer zone between South Lynn to the South, the Friars to the east, and the South Quay and town centre to the north. It is now being investigated by the Directors of the Sharp Archaeological Project and the Lynn Under Siege Project for 500 years of historic finds which could tell the story of the lives of everyday residents. The Bus Lane was opened in 2011 under the auspices of the Countryside Agency with the important function of routing buses from the south into Lynn more quickly into town and encouraging modal shift and reducing pollution.</p> <p>1. First of all, I would point out that County Highways acted as the agent for the Developer in this Application, but I would remind the Committee that it must remain impartial and must not be fettered in its decision-making by the planning permission granted by the Borough on 4 September 2017. There is no Duty to Agree in law, for the Highways and Transport Authority, with the local Planning Authority. The County is responsible for the highway and transport and cannot delegate its responsibility for the highways network to another authority. This Traffic Order, if granted, would have the highways effect of trapping in vehicles that wished to exit Hardings Way South, and preventing vehicles that wished to enter from doing so. This would create driver frustration and road rage. Also dangerous conflicts with buses. Traffic Order is Contrary to Senior Highways Officer Advice. Highways Officer Tim Edmunds said it was dangerous to open up Hardings Way to general traffic. This was after a single incident when the police had opened up the road in an emergency to relieve congestion and created a dangerous situation.</p> <p>1. Archaeology and Heritage Assets: Traffic Order against NPPF</p> <p>As new facts have come to light, since the Borough Council granted itself the Planning Permission that is the basis for this Traffic Order, the Committee must set the local Development Plan to one side in coming to a decision, as it is now out-of-date, as it was produced before the discovery of important archaeology in Norfolk. The National Policy Planning Framework First Principle is clear that local plans should be kept up to date. Mapping on Hardings Pits and under Hardings Way, for the remains of significant English Civil War ramparts and earthworks, unique to King's Lynn, is ongoing and unlikely to be completed until next year. The earthworks that extend at least 53 metres wide under Hardings Pits and Hardings Way where the development that this Traffic Order would facilitate was planned, are of such outstanding quality that (a) they exceed the standard of the civil war fortifications of London and place King's Lynn on the map for outstanding archaeology and (b) made King's Lynn the strongest fortress in East Anglia in the Civil War, a Unique Selling Point for local tourism, if preserved correctly in a proper setting.</p> <p>1.1 Archaeology is a material planning consideration, protected on a par with heritage assets so this Traffic Order must be refused.</p> <p>1.2 The Traffic Order is against the National Policy Planning Framework which says, where the development plan is out of date, permission should not be granted where the adverse effects, as in this case, would significantly and demonstrably outweigh the benefits. The Traffic Order must be refused as the 3 new road accesses it would place to the east and west of Hardings Way, would seriously compromise the ongoing excavation and preservation of this potential World Heritage Site, and of the associated finds of 500 years of local history, telling the story of people's lives.</p> <p>The Traffic Order, by placing general traffic and large HGV traffic, including 7.5 tonne articulated lorries on Hardings Way South, would impinge on the setting. I would refer the Committee to the objection of David Flintham of the Lynn Under Siege Project.</p> <p>2. Intensification of Use of a Corridor Of Movement at a Proven Point of Congestion near Accident Blackspot, South Gates Roundabout, Contrary to Highway Safety</p> <p>2.1 The Traffic Order, by permitting the building of 3 new access roads onto Hardings Way South and the opening up Hardings Way South to general traffic and articulated lorries and HGV's, will intensify use of a corridor of movement, Wisbech Road, at a proven point of congestion, the entry to Hardings Way South, and this would be contrary to Highways Safety, so the Traffic Order must be refused. Wisbech Road is the main artery into the town through South Lynn, from the Freebridge over the River Ouse and the settlements on the Western Bank. Traffic queues at peak times, and outside normal peak times, all along Wisbech Road up to the accident black spot of the South Gates Roundabout and this covers the entry to Hardings Way South. Traffic on Wisbech Road cannot move forward by Hardings Way, when the lights are on green. Traffic already queues behind buses turning left into the bus lane. The Traffic Order would therefore produce a dangerous "trapped-in" situation for traffic trying to exit from planned development on Hardings Way South. Opening up Hardings Way South as an exit would be likely to lead to driver frustration, road rage and would be unsafe. (The blocked exit effect already happens when traffic can't leave the Hardwick Roundabout to go into Lynn, because traffic is queued along the roundabout towards Queen Elizabeth Way. Highways planners are sadly making planning mistakes about the highways network in Lynn) One can imagine the gridlock effect of vehicles from the 90 parking spaces from two of the three new access roads, trying to leave the Hardings Way South exit onto Wisbech Road at peak times. Equally well, this Traffic Order is against the advice of Senior Highways Engineer Tim Edmunds, who said it is not safe to open up Hardings Way to all traffic, after the police had opened up the road just once in 2013 in a failed attempt to relieve traffic flow after an accident, which instead created dangerous points of conflict.</p> <p>Advice from Senior County Highways Engineer against use of Hardings Way for general traffic (Tim Edmunds):</p> <p>"Sorry for the delay in responding. As far as the County Council is concerned we have no plans to alter the use of Hardings Way. I have tasked some officers to review with the police the recent occasion when the police instructed that it be opened up to light traffic to ease severe traffic problems arising from matters elsewhere on the road network, but our stance as highway authority is quite clear that the route is for pedestrians, cyclists and public transport and it is not safe to open it up to any other use."</p> <p>2.2 Damage to Wisbech Road by HGV's</p> <p>It is also very important for the Committee to be aware of the recent highways and financial implications of intensification of the use of the Wisbech Road as a corridor of movement and the unintended effect of its use as a "relief" road. It is a very sad fact that, in the last 7 months, with the closure of the Hardwick and Saddlebow Interchange Bridges on the A47 Bypass, 7.5 tonne heavy lorries using Wisbech Road as a short-cut and return, albeit illegally, have broken up the road which will have to be completely resurfaced this August at a cost to County Highways. The damage to the foundations to the road has also caused damage to homes along Wisbech Road, including cracked water tanks and dropped doorways, and is unfortunately likely to lead to claims for compensation against County Highways. A Community Vehicle Watch recently had to be set up by myself and local residents in an effort to discourage the use of Wisbech Road by heavy vehicles.</p> <p>This also shows the danger of going against Government Policy that you cannot have relief roads that route traffic into town centres. The answer is encouraging the use of public transport, keeping lorries out of town centres, and park and ride and more use of the Ferry.</p> <p>2.3 Saddlebow Bus Gate</p> <p>It is also essential background for the Committee that the Saddlebow Bus Gate, at the end of Saddlebow Road, onto the Hardwick Interchange was set up following a study in 2005, to relieve congestion in South Lynn by stopping traffic from the Bypass cutting through. It was introduced to encourage local residents' ability to access bus services, reduce car use, lower traffic levels and decrease journey times into Lynn. The study said how important it was to relieve congestion in a densely populated area. With up to 900 new homes on the Nar Ouse Regeneration Area with its major exit opposite Hardings Way, general traffic from Hardings Way South, if the Traffic Order is permitted, would be in conflict with the flow of traffic from the new development, as well as with the traffic of Wisbech Road and will lead to a new gridlock situation.</p> <p>2.4 Hardings Way Bus and Cycle Lane</p> <p>Hardings Way is a single-lane bus lane, cycle track and pedestrian route from South Lynn to the town centre, specifically introduced as part of the Millennium Community Project, to reduce journey times into the town centre by bus, and encourage the use of public transport and cycling from the high-density new Nar Ouse Way development into Lynn of up to 900 new homes. It is also a designated safe route to school. There are bus gates at either end which can only be opened by transponders held by buses or emergency vehicles. Hardings Way is closed to all private transport, including taxis. Opening any part of Hardings Way to general traffic is therefore against the National Policy Planning Framework which says: Transport policies have an important role to play in facilitating sustainable development but also in contributing to wider sustainability and health objectives. Smarter use of technologies can reduce the need to travel. The transport system needs to be balanced in favour of sustainable transport. In 2008, Norfolk County Council applied for funds under the Community Infrastructure Fund (CIF) to "improve public transport into King's Lynn". The bid document reads "this scheme will provide for a congestion free bus lane and improved bus journey times and reliability. This will contribute to improvements in air quality by reductions in congestion and the re-routing of buses. It will also contribute to modal shift by providing better cycling and pedestrian provision as well as improved bus services". If Norfolk County Council, under pressure from the Borough Council, resiles from Hardings Way being continuous under the provisions of the CIF Bid, then Norfolk County Council are obliged to repay the money granted under the terms of the bid back to the government in their entirety.</p> <p>2.5 By placing 7.5 tonne articulated lorries, HGV's and general traffic and 3 new road accesses on to Hardings Way South, the Traffic Order will introduce points of conflict, noise and pollution with buses, pedestrians, children walking to school and disabled people in buggies and will discourage walking and cycling. Parents will be more likely to drive children to school, adding to traffic congestion.</p> <p>2.6 The Traffic Order will make it clearly unsafe for buses leaving the bus gate who will then encounter large articulated lorries wheeling into or out of the new road access to Overtons and thus will slow down the buses and detract from the purpose of the bus lane, to speed up the movement of public transport.</p> <p>2.7 It is a disgrace that the Traffic Order would place all the heavy 7.5 tonne lorries from Overtons' current Wisbech Road access, onto the children's safe walk to school and the buggy route on Hardings Way South just when we have set up a Community Vehicle Watch to stop 7.5 HGV traffic using Wisbech Road, damaging the surface and keeping my pensioner constituents awake at night.</p> <p>2.8 By removing the cycle and bus only signs at the entry to Hardings Way South the Traffic Order would be dangerous, as it would encourage the hazard of traffic mistakenly straying on to the bus lane, further increasing highways hazards.</p> <p>Parked cars on the pavement, whether prohibited or not, would occur and increase points of hazard for vulnerable users. A recent audit of London Road found sections of the pavement considerably narrowed by a string of parked vans making access for buggies difficult.</p> <p>2.9 Disrupting the route of road to the Safe Route to School, the Traffic Order would mean that 400-450 children (as told by Whitefriars School to Alexandra Kemp and Heather Tove of West Norfolk Disability Information Centre on 29 May) will have</p>	11 June 2018
----	--	---	--------------

		<p>2.9 by introducing the points of conflict with the Safe Route to School, the Traffic Order would mean that 120-150 children (as told by Whitefriars School to Alexandra Kemp and Jonathan Loye of West Norfolk Disability Information Centre on 23 May) walking to Whitefriars from South Lynn would lose their independence. Parents let them walk to school on their own as the road is safe, but would not allow them to do so if general traffic was placed there, particularly the articulated lorries the Traffic Order will allow. The safe route to school along the wide pavement is then crossed at the sluice gates and the walk along the section of road next to the school is safe from parked cars, with the line of bollards. Traffic Order Against Advice of Senior Highways Engineer Quentin Brogdale This Traffic Order is against the advice of Senior Highways Officer Quentin Brogdale who assured the then Head of Whitefriars School, Lee Stephens in 2009, ( see letters of objection) that County Highways would never open up Hardings Way Bus Lane to general traffic and on that basis, the School withdrew its objection to the change from a cycle track to a bus lane.</p> <p>3. This Traffic Order is Against Norfolk County Council's Core Strategy, Open Access Policy and Walking and Cycling Policies</p> <p>The placing of general traffic beside Hardings Pits, the community doorstep green, set up by residents and maintained by volunteers, in 2005, would introduce noise and congestion and detract from the peace and quiet of the green lung of Lynn, the recreation area and safe walking route into town for 6,000 people and affect public health. Highways England has pointed out that this is against this Council's Core Strategy and Open Access Policy which is to encourage walking and cycling, whereas this Traffic Order will deter the Traffic Order is against this Council's Walking and Cycling Policy which is to increase the number of journeys made to work by walking and cycling and to make Norfolk the top destination for tourists for walking and cycling. You can't do that if you allow HGV's and general traffic onto the entry of the bus and cycle lane. I invite the Committee to reject this traffic order on the grounds of the intrinsic public benefit, of highways network safety, and the greater good in the life of the town and townsfolk of Lynn and tourism, of this highway remaining traffic free.</p>	
		<p><b>NCC Officer Comments</b></p> <p>The advertised Traffic Regulation Order is to make Harding's Way open to all traffic for a length of 125 metres from its junction with Wisbech Road. This proposal does not seek to allow any access to Boal Quay to the north (Concern raised by objector). It is worth noting that the number of HGV's is likely to be low and following implementation of the new access point to the Overton's site from Harding's Way, traffic movements from the existing access/egress arrangement on Wisbech Road should be significantly reduced, particularly for large vehicles. A reduction in movements at the existing location will benefit users of the shared use facility on Wisbech Road as there will be reduced conflict.</p> <p>The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility.</p> <p>An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Harding's Way. However, it is only likely to have a significant detrimental impact on disabled pedestrians – specifically blind and visually impaired people, people with multi-sensory impairments (e.g. people who are blind and deaf), and people with mobility impairments. This may include older people, who may not consider themselves disabled, but whom have age-related health conditions or mobility issues that affect their ability to get about. Recommendations are made in the EQA report for amendments to the design to lessen the impact for consideration by the Committee. 18. These accessibility considerations will make it comparatively easier to use the proposed crossing point than many others in the area. This is important to note, because in order to arrive at Harding's Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Harding's Way.</p> <p>Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process.</p> <p>The advertised Traffic Regulation Order is to make Harding's Way open to all traffic for a length of 125 metres from its junction with Wisbech Road. This proposal does not seek to allow any access to Boal Quay to the north (Concern raised by objector). It is worth noting that the number of HGV's is likely to be low and following implementation of the new access point to the Overton's site from Harding's Way, traffic movements from the existing access/egress arrangement on Wisbech Road should be significantly reduced, particularly for large vehicles. The HGV movements will also be safer under signal control rather than the current merge with traffic. A reduction in movements at the existing location will benefit users of the shared use facility on Wisbech Road as there will be reduced conflict. <del>The damage referenced by the objector was due to Wisbech Road being used as a diversion during works on the A47 and is not a normal occurrence.</del></p>	
7)	<p><b>David Flintham</b> King's Lynn Under Siege English Civil War Archaeological Project</p>	<p><b>Consultee Comment</b></p> <p>To whom this may concern. The King's Lynn Under Siege (KLUS) English Civil War Archaeological Project wishes to register its objection to the above traffic order on the grounds that the Harding's Pits area is potentially a significant archaeological site. Any changes to the current environment and topography should only be considered once a thorough archaeological investigation has been completed. <b>Historical background and context</b> An important port on the east-coast, at the outbreak of the English Civil War, King's Lynn was, a Parliamentary stronghold, and its existing defences were improved by the addition of earthworks. But on 13 August 1643, its governor, Sir Hamon L'Estrange, declared openly for the King, and its garrison of 2,000 men and forty guns prepared for a siege. Parliament reacted quickly, blockading the town by sea, and sending a force of 4,500 under the Earl of Manchester to besiege the town, taking the northern blockhouse and its guns, and setting up siege batteries, commencing a bombardment from West Lynn. The Royalists held out until the middle of September, but out-numbered, running low on food and with no hope of relief, and with Manchester threatening to storm the town, on 16 September 1643, the defenders surrendered. Following its capture, Parliament took steps to repair and improve the existing defences, including a completely new line of fortifications to be constructed between the South Gate and the River Ouse, and as these were free from the constraints of what went before, the latest techniques could be utilised. What was constructed were state-of-the-art, and amongst the most modern and sophisticated built anywhere in Britain during the entire period, transforming King's Lynn the strongest fortress in East Anglia. Thus King's Lynn is of national, perhaps even international importance.</p> <p><b>Archaeological Investigation</b> Although an archaeological investigation of Harding's Pits has previously been undertaken (2009), this failed to find significant traces of the fortifications. The reason for this can probably be attributed to a) the 2009 investigation was not undertaken with the specific objective of finding the fortifications, and b) it is likely that the investigation was searching in the wrong place. In February 2018, the King's Lynn Under Siege (KLUS) English Civil War Archaeological Project set out its intentions for its activity during the summer of 2018. To date, the majority of this activity has focused on the Harding's Pits area. Having undertaken significant desk-top research during the spring of 2018, the project is preparing to move to its next stage, and, therefore, is setting out its next intentions in a proposal which will be submitted to the local authorities in July 2018. During the summer/autumn of 2018, the project is proposing to test the archaeological potential and logistical arrangements with a view to 'formally' launch the project at the King's Lynn Heritage Open Day in September, with a full-scale, community-based research, training, and education project to commence in summer 2019. The pilot will comprise the following: a small team of mainly local volunteer archaeologists carrying out geophysical survey work and possible sample excavation ('test pits') of target sites in the Harding's Pits area backed up by on-going desktop research. On 5th April 2018, an initial conversation was had with the local authority regarding the granting of the necessary licences for the ground investigation. <b>Conclusion</b> Therefore, as set out earlier in this e-mail, no changes to the Harding's Pits area should be contemplated until a thorough archaeological investigation has been completed. With regard to this, the KLUS proposal will be made available to you once it has been finalised. I would be grateful if you would acknowledge this objection as appropriate. Thanked for giving this matter your attention and looks forward to hearing from you in due course.</p> <p><b>NCC Officer Comments</b></p> <p>The proposed amendment to the Order seeks to legalise vehicular access to the approved new accesses, to allow all vehicles to use Hardings Way between the relocated bus gate and Wisbech Road. Therefore, there are no physical works associated to the Order that will impact upon any archaeological site. However, the original scheme to deliver Hardings Way was subject to a Norfolk Landscape Archaeology Archaeological Brief as specified by approved planning permission 10/00264/FM.</p>	11 June 2018
8)	<p><b>Cllr Lesley Bambridge</b> Cllr.Lesley.Bambridge@ west-norfolk.gov.uk</p>	<p><b>Consultee Comment</b></p> <p>Objects to the use of Hardings Way for 7.5 tonne vehicles, even for access, because of the exit point at Boal Quay. This is just not appropriate as vehicles would either have to turn right towards Millfleet and then onto London Road or, even worse, they would have to turn left onto South Quay.</p> <p><b>NCC Officer Comments</b></p> <p>The advertised Traffic Regulation Order is to make Harding's Way open to all traffic for a length of 125 metres from its junction with Wisbech Road. This proposal does not seek to allow any access to Boal Quay to the north (Concern raised by objector). It is worth noting that the number of HGV's is likely to be low and following implementation of the new access point to the Overton's site from Harding's Way, traffic movements from the existing access/egress arrangement on Wisbech Road should be significantly reduced, particularly for large vehicles. A reduction in movements at the existing location will benefit users of the shared use facility on Wisbech Road as there will be reduced conflict.</p>	12 June 2018
9)	<p><b>Debbie Gosman</b> (Natural England) Debbie.Gosman@natural england.org.uk</p>	<p><b>Consultee Comment</b></p> <p>Writes on behalf of Natural England's Norfolk &amp; Suffolk Team because they are concerned about the Traffic Order which has been brought to our attention regarding Hardings Way in King's Lynn. Harding Way was opened as a tarmac cycle track in 2003, part funded by Sustrans 'Safe Routes to School' and supported by the Countryside Agency. Their understanding is that Norfolk County Council's application for a Traffic Order is as a result of a planning application made by Kings Lynn and West Borough Council to provide vehicular accesses into land owned by the Borough Council at the southern end of Hardings Way. We were contacted about this proposal because of the affect it could have on Harding's Pit which runs alongside it. This is a Doorstep Green developed in conjunction with the Countryside Agency in 2003 and for which Natural England still has legal oversight. It is also a very important green space which serves South Lynn. In 2008, 91 birds and 17 butterflies were recorded there and the biodiversity on the site is currently being accessed by Norfolk Wildlife Trust to see if it could become a County Wildlife Site. We are aware that the Harding Pit's Association, Whitefriars Church of England Primary School &amp; the West Norfolk Disability Information Service are very concerned about the effects these changes will have on local residents who access Hardings way on a regular basis. Have been informed that Norfolk County Council's reasons for making the Traffic Order is to allow three new accesses to the highway from adjoining land are proposed to be formed at the southern end of Hardings Way in association with proposed development of the land. To enable the effective use of these accesses by traffic, it is proposed to make this length of Hardings Way available for use by all traffic. There is no mention in the Traffic Order about the effects such a decision, if it was granted, would have on any further options for the rest of Harding's way, which have been made as a result of planning approval for the Riverside Development Master Plan. Three options were put forward by the developer to consider opening up the whole of Hardings Way to traffic and building a car park on the Nars Loop. Believes this is an oversight and needs to be reconsidered as Natural England was not able to comment fully on these proposals 'because there was insufficient information about the multiple options to enable them to provide a substantive response to this consultation as required under the Town and Country Planning (Development Management Procedure) (England) Order 2015'. Believes if the Traffic Order is approved as it is, it may give a 'green light' to fully opening up Hardings way, without looking at the longer term consequences of such a move. At a time when Kings Lynn has levels of adult obesity of between 27.6% - 30% with childhood obesity also a major concern, and health professional admitting that without some form of intervention to help change people's lifestyle the cost of treating weight related diabetes, the cost to the county could be more that £26 million, it seems short sighted that more consideration is not being given to improving the excellent cycling and walking infrastructure that the town already have. This would help to encourage even more people to walk and cycling and use other car free alternatives – such as greater use of the ferry from the west of the town, and incorporate the suggestions from the North Runtun and West Winch Neighbourhood Plan for sustainable transport improvements. Believes that if these improvements were implemented they would help reduce the congestion and air pollution in Kings Lynn and make it an even nicer place to live and visit. Natural England would like you to consider that these two applications become part of a package of Green Infrastructure measures for Kings Lynn, rather than just as two individual planning applications. Alternative suggestions could then be considered, to help alleviate congestion occurring in the town centre and reduce the need for the Council to open up Hardings Way to traffic to alleviate it. This should only be seen a short term measure and not a long term solution. This would also allow proper oversight and allow time to gather views from experts and consultees, and ensure that the best social, economic or environmental outcomes which were sustainable could be found and where in line with The 25 year environment Plan, the National Policy &amp; Planning Framework - regarding green space and rights of way and coastal access, the Habitats Directive and the Norfolk Access Improvement Plan. As Kings Lynn already has higher levels of cycling and walking than elsewhere in Norfolk or Suffolk and Harding Pit as a Doorstep Green has already shown how local communities can influence the take up of healthy lifestyles, by working together with interested parties including Natural England, Kings Lynn could showcase the many benefits of being a town supporting active travel which will also boost the economy and also help its regeneration. Funding could also be sort from New Anglia Local Enterprise Partnership for the improvements needed, as they have recently funded walking and cycling improvements in Bury St Edmunds. This could would provide any opportunity to include using the disused railways as trails, which are mentioned in the Norfolk Access Improvement Plan and which would increase the low impact tourism offer for the town as well.</p> <p><b>Important considerations</b></p> <p><b>Harding's Pits Doorstep Green</b></p> <p>Doorstep Greens are designated areas of public open space for local communities and recreation that provide a wide range of habitats, conserve natural systems and support ecosystems. Local Plans and developments should consider the need for multi-functional green space, urban and rural, which is capable of delivering a wide range of environmental and quality of life benefits for local communities. Successful green spaces such as Harding's Pit are an existing part of that infrastructure. In line with the NPPF (Paragraph 114) local planning authorities should set out a strategic approach in their local Plans, planning positively for the creation, protection, enhancement and management of networks of biodiversity and green infrastructure.</p>	12 June 2018

		<p>Local planning authorities should set out a strategic approach in their Local Plans, planning positively for the creation, protection, enhancement and management of networks of biodiversity and green infrastructure.</p> <p><b>Nar Loop</b> With regards to the options to develop the Nar Loop into a parking area, proposals should take account of climate change over the longer term, including factors such as flood risk, coastal change, water supply and changes to biodiversity and landscape. New development should be planned to avoid increased vulnerability to the range of impacts arising from climate change. When new development is brought forward in areas which are vulnerable, care should be taken to ensure that risks can be managed through suitable adaptation measures, including through the planning of green infrastructure.</p> <p><b>Rights of Way, Access land, Coastal access and National Trails</b> Paragraph 75 of the National Policy Planning Framework highlights the important of public rights of way and access. Development should consider potential impacts on access land, common land, rights of way and coastal access routes in the vicinity of the development. Consideration should also be given to the potential impacts on the any nearby National Trails. The National Trails website <a href="http://www.nationaltrail.co.uk">www.nationaltrail.co.uk</a> provides information including contact details for the National Trail Officer. Appropriate mitigation measures should be incorporated for any adverse impacts.</p>	
		<p><b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The approved scheme which relocates the bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north towards Hardings Pits is maintained. Apart from the relocation of fencing, there are no proposed works in the immediate vicinity of Hardings Pit that would affect the green space and wildlife. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal. The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Any issues pertaining to the long term picture of Hardings Way are not subject to this amendment Order. This process seeks to relocate the existing bus gate 15m north from its current location and change the existing bus and cycle only Order to all traffic between the relocated bus gate and Wisbech Road only.</p>	
10)	<p><b>Michael Rayner</b> Planning Campaigns Consultant CPRE Norfolk</p>	<p><b>Consultee Comment</b> CPRE Norfolk makes the following comments/objections regarding these proposals: • We are concerned about the gradual change in usage of Harding's Way South, away from being only used by buses, emergency vehicles, cyclists and pedestrians. The current proposals will reduce this limited usage to a smaller section of the road due to the movement of the bus gate 15m north. • The proposals will compromise the safety of existing users of Harding's Way South through the opening up of an increased part of it to all traffic. Primarily this will adversely affect those who use it as a route to and from school, work, shop and for recreation. • We would hope that solutions to increased car use in King's Lynn could be found by increasing opportunities for public transport, cycling and walking. Instead, this proposal will be to the detriment of these modes of transport.</p> <p><b>NCC Officer Comments</b> Any issues pertaining to the long term picture of Hardings Way are not subject to this amendment Order. This process seeks to relocate the existing bus gate 15m north from its current location and change the existing bus and cycle only Order to all traffic between the relocated bus gate and Wisbech Road only. The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility.</p>	12 June 2018
11)	<p><b>MJ Ray</b> Planning Delegate of the Local Cycle nation Member Group, KLWNBUG</p>	<p><b>Consultee Comment</b> Writes to repeat OBJECTION to the above TRO amendment order. None of these points seem to have been addressed in any meaningful way. Does anyone at Norfolk County Council really care about reducing congestion, preventing road casualties (especially among schoolchildren), improving the local economy and improving air quality? Urges to refer this bonkers plan to the Vulnerable Road Users section of the Casualty Reduction Partnership for comments. Further, notes that the latest drawings show NO SAFE DIRECT CROSSING between the cycle ways on the two sides of Harding's Way. If that is not corrected clearly, with dropped kerbs and a priority crossing marked in front of the bus gate, it is extremely likely that people would cross diagonally between the Overton's HGV access and the Harding's Pits dropped kerbs, or between the crossing of the mouth of the Wisbech Road and the new southernmost access on the west side. Of course, having people walking and cycling looking to cross the road instead of looking for turning motorists ignoring priority is likely to result in casualties eventually. Please pay heed to this: I think you will find that every time predicts such desire lines, they occur, such as on the Hardwick Sainsbury's development where people routinely walk in/out on the corner nearest Hardwick Road and cross many lanes of rather fast entry/exit traffic - it's not that the people are wrong but that that road layout should never have been approved uncorrected. The main objections to opening part of Hardings Way remain as follows: Wishes to object to the above-named proposed Traffic Order amendment as the planning delegate of the local Cycle nation member group, KLWNBUG, on the grounds that the amendment order would increase danger and the likelihood of danger to persons or other traffic using the road; cause damage to the road and to protective structures around the road; hinder the passage of pedestrians, cyclists and buses; allow vehicular traffic of a kind which is unsuitable having regard to the existing character of the adjoining Harding's Pits Doorstep Green; fail to preserve the character of a road which is specially suitable for use by persons on foot; harm the amenities of the area through which the road runs; and harm the "promoting walking and cycling" action of the Air Quality Action Plan. In short, this proposed amendment is notable in doing the opposite of every single thing that such a Traffic Regulation Order is meant to achieve. As such, I believe this amendment would probably not be legal. Furthermore, the county council has given repeated assurances during the conversion from cycleway to restricted carriageway that this road would not be opened to through traffic and that did not mean simply traffic between Wisbech Road and Boal Quay but traffic through to any other road, including ones not constructed at that time. I urge the county council to honour its word and decline to make this amendment on moral grounds also. On danger, the report from the 'Get Britain Cycling' APPCG Inquiry states clearly that it found "Heavy Goods vehicles are disproportionately involved in deaths and serious injuries, despite some excellent work by some freight organisations." As such, a traffic order amendment that permits "max legal HGVs" to start using a cycle route between the town centre, a school and a residential area is clearly likely to increase the likelihood of danger to people who currently use that route. At least four new HGV-cycling and three new HGV-walking conflict points would be created, as well as many new car-NMU conflict points. If all the proposed accesses are brought into use with the forecast usage levels, this would amount to many thousands of extra NMU-vehicle interactions every day, some of which are likely to be dangerous. Despite the use of traffic forecast models, there are often unintended and unforeseen consequences of adding new routes to the networks, such as the reports of the new Lynnsport Way attracting dangerous anti-social speeding traffic, according to Cllr Collis. The damage to roads from vehicles is roughly proportional to the weight on each wheel to the fourth power, so a 2 tonne 4-wheel car typically causes about 10,000 times more damage to a road than a 100kg bike and rider on two wheels, while a 30 tonne 18-wheeler HGV might do more than 1 million times the damage. (Estimates from our colleagues at "Cycling in Christchurch"). So it's obvious that opening part of this road to general traffic will accelerate the damage. I hope it is obvious that increasing private and goods traffic on any route will hinder the passage of buses, cyclists and walkers and that max legal HGVs are unsuitable for the character of the nearby doorstep green and the existing road which is especially suitable for walking, plus that it reduces their amenity value. The forecast extra traffic from the proposed accesses would directly increase pollution and harm air quality in the local area, as well as undermine the air quality action plan task of promoting walking and cycling by adding motor vehicles to part of the cycle route between the still-being-built Nar Ouse Regeneration Area and the town centre. So, as there are no valid legal grounds to amend the order, I urge you not to amend it. However, if you do make this order, it surely must be accompanied by access-only and parking restrictions to prevent the road's use as an ad-hoc free car park that would obstruct bus and cycle traffic. I also urge you to make the entire road a 20mph limit (extending the South Lynn 20mph zone to the South Gates Roundabout, ideally), to add Advanced Stop Boxes at the traffic lights and to correct the bus/cycle signs to add "local" to the bus symbol. Additionally, surely some funding must be set aside by somebody for enforcement of the restrictions for them to be worthwhile, even if it's only automated issuing of fines using number-plate-reading cameras. The current non-enforcement of the existing restrictions on the southern section - and even on the whole route when the bollards are stuck down - is nothing short of scandalous and seems like the county council is essentially failing to collect money to which it is entitled. Finally, notes that we still have not seen the Vulnerable Road Users Audit of the route to confirm what further measures can be taken to safeguard people using this vital piece of green infrastructure. Thanks for attention and awaits reply with interest, hopefully to confirm that will not be making the proposed order and that the long overdue Vulnerable Road Users Audit of the route will finally be carried out with the participation of local cycling groups.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. The proposal has been subject to independent Safety Audit and Equality Impact Assessment and whilst some recommendations have been made that would influence the final design, Norfolk County Council are content that the proposal is not unsafe or illegal. Traffic Regulation Orders are made under The Local Authorities Traffic Orders (Procedure) (England &amp; Wales) Regulations 1996, exercising its powers under the 1984 Highways Act in accordance with Section 1, Sub section C (for facilitating the passage on the road or any other road of any class of traffic (including pedestrians). The effect of which will be to reduce the extent of U23679 Harding's Way operating as a Bus and Cycle Lane, to allow general traffic to enter and proceed in the length of road from C8 Wisbech Road for a distance of 125 metres northwards. This will also move the existing Bus Gate 15m northwards. The consultation was undertaken in accordance with the 1996 Traffic Orders procedure, with adverts displayed in the local press, along the advertised length and affected properties informed, during May 2018. Objections received are now being presented in this report for consideration by the Environment, Transport &amp; Development Committee. Norfolk County Council are satisfied that the correct legal process has been followed in accordance with the Local Authorities Traffic Orders (Procedure) (England &amp; Wales) Regulations 1996. The advertised Traffic Regulation Order is to make Harding's Way open to all traffic for a length of 125 metres from its junction with Wisbech Road. This proposal does not seek to allow any access to Boal Quay to the north (Concern raised by objector). It is worth noting that the number of HGV's is likely to be low and following implementation of the new access point to the Overton's site from Harding's Way, traffic movements from the existing access/egress arrangement on Wisbech Road should be significantly reduced, particularly for large vehicles. A reduction in movements at the existing location will benefit users of the shared use facility on Wisbech Road as there will be reduced conflict.</p>	12 June 2018
12)	<p><b>Philip Broadbent-Yale</b> Sustrans</p>	<p><b>Consultee Comment</b> States Sustrans fully supports the Vision for the Kings Lynn Waterfront area: 'Our vision for King's Lynn waterfront is a vibrant river-edge quarter threaded through into the fabric of the existing town'. To restore the area for cultural, community and tourism benefit will have great benefits. Kings Lynn Quayside offers wonderful opportunities to the town for regeneration, tourism and economic development. However we are very concerned about the proposal to open up Hardings Way South to traffic other than the existing public transport, cycles and pedestrians. It is important that this area is properly planned as part of an integrated pedestrian, cycling and public transport vision for active travel, which will really benefit the Waterfront, Quay and the wider town. Hardings Way is part of NCN 1, the Sustrans and EuroVelo North Sea Coastal Route, that passes through the town. The width of the road is insufficient for the safety of pedestrians and cyclists, in addition to two-way traffic. It is inappropriate to plan for vehicles on such a narrow road. We would therefore object to the TRO proposed. As we have offered last year, Sustrans would be happy to contribute to a comprehensive way marking scheme for the Waterfront. To ensure that pedestrian and cycle access 'is threaded through' to the rest of the town and to consider an overall active travel policy, and routes for the town.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility.</p>	12 June 2018
13)	<p><b>Resident 1</b></p>	<p><b>Consultee Comment</b> As a severely partially sighted/blind person, feels that if all motor traffic were allowed on Harding's Way, it would significantly make the journey into town more dangerous. At the moment, it is a safe alternative to London road, which when on gets to corners, it is very difficult for drivers to see. Would therefore oppose any lifting of restrictions on traffic being allowed over the Harding's Way south area of Harding's Way. Is available to talk regarding the problems she would face.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility.</p>	18 May 2018

14)	Resident 2	<p><b>Consultee Comment</b> To Committee: Requests to reject Harding's Way south Traffic Order because she is disabled and is in a wheelchair. Takes daughter aged 5 to Whitefriars Primary along the safe route to school on Harding's Way. Cannot get up the other roads like Friar Street or London Road because they are too busy, too dangerous and they do not have enough drop kerbs. It would be disastrous taking daughter to school if this Traffic Order is made because of the general traffic of HGV's put upon Harding's Way South. Would not be able to take daughter to school independently. Will affect her independence and her daughter's independence. Daughter is visually impaired and has special needs and it is really important to her daughter's quality of life to have a safe route to school. Requests please do not take this away.</p> <p><b>NCC Officer Comments</b> An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Harding's Way. However, it is only likely to have a significant detrimental impact on disabled pedestrians – specifically blind and visually impaired people, people with multi-sensory impairments (e.g. people who are blind and deaf), and people with mobility impairments. This may include older people, who may not consider themselves disabled, but whom have age-related health conditions or mobility issues that affect their ability to get about. Recommendations are made in the EQA report for amendments to the design to lessen the impact for consideration by the Committee. 18. These accessibility considerations will make it comparatively easier to use the proposed crossing point than many others in the area. This is important to note, because in order to arrive at Harding's Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Harding's Way.</p>	18 May 2018
15)	Resident 3	<p><b>Consultee Comment</b> To Committee: Requests not to make Harding's Way South Traffic Order on behalf of disabled daughter and grand-daughter because if her daughter has a hospital appointment and she has to pick up her grand-daughter from school Harding's Way South is the only safe route for her to walk. Says she is 73 and the traffic is horrendous. Traffic on Harding's Way would make the congestion worse if the order is made because the traffic would have no where to flow to. Adds her daughter suffers from non-epileptic fits and if she has to get to school quickly to pick up her grand-child, this order would make it take longer for her to get to Whitefriars School.</p> <p><b>NCC Officer Comments</b> An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Harding's Way. However, it is only likely to have a significant detrimental impact on disabled pedestrians – specifically blind and visually impaired people, people with multi-sensory impairments (e.g. people who are blind and deaf), and people with mobility impairments. This is important to note, because in order to arrive at Harding's Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Harding's Way.</p>	18 May 2018
16)	Resident 4	<p><b>Consultee Comment</b> Does not want Harding's Way South to be open to all traffic. Have been able to go to town using the Harding's Way. Is asthmatic and disabled and have to use a scooter, the London road affects breathing and the side roads coming off the London Road is very difficult to cross, the Harding's Way South is a very pleasant way to go to town. Says please think of asthmatics, unless you have it, you would not appreciate how lovely the walk into town is for them. Adds a lot of disabled people use this route.</p> <p><b>NCC Officer Comments</b> An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Harding's Way. However, it is only likely to have a significant detrimental impact on disabled pedestrians – specifically blind and visually impaired people, people with multi-sensory impairments (e.g. people who are blind and deaf), and people with mobility impairments. This is important to note, because in order to arrive at Harding's Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Harding's Way. Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving.</p>	18 May 2018
17)	Resident 5	<p><b>Consultee Comment</b> Opposes to the Bus Lane at Harding's Way South being opened to traffic. Says wife is disabled and uses a mobile scooter. Uses Harding's Way to get to town as his wife is chronic asthmatic and London Road is too polluted and affects her breathing.</p> <p><b>NCC Officer Comments</b> An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Harding's Way. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving. The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The approved scheme which relocates the bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north towards Hardings Pits is maintained. Apart from the relocation of fencing, there are no proposed works in the immediate vicinity of Hardings Pit that would affect the green space and wildlife. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal.</p>	18 May 2018
19)	Resident 7	<p><b>Consultee Comment</b> As a resident of South Lynn for 25 plus years, finds it unbelievable that anyone would consider taking away a child's safe and pollution free route to school. Walks through Harding's Pits regularly to get to the town centre in a bid not to drive into park in King's Lynn. Also volunteers to help keep Harding's Pits clean + tidy and would not appreciate having traffic constantly driving past and ruining the peace and quite and disturbing the wild life in such an important green space.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal.</p>	18 May 2018
20)	Resident 8	<p><b>Consultee Comment</b> To Committee: Is against Harding's Way South Traffic order because has a child aged 5 at Whitefriars School and his brother will join him there next year and traffic on Harding's way South will compromise children's safety.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility.</p>	18 May 2018
		<p><b>Consultee Comment</b> To Committee: Requests not to open Harding's Pit South to traffic as it is too dangerous for school children and elderly people in mobility scooters. Is 79 years old and have lived in South Lynn all her life. Would like the bus route to stay as a bus route and no more traffic to come along there. For years there have been talks about putting a marina and now houses have been proposed which she thinks is a disgrace.</p>	

21)	Resident 9	<p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Harding's Way. However, it is only likely to have a significant detrimental impact on disabled pedestrians – specifically blind and visually impaired people, people with multi-sensory impairments (e.g. people who are blind and deaf), and people with mobility impairments. This may include older people, who may not consider themselves disabled, but whom have age-related health conditions or mobility issues that affect their ability to get about. Recommendations are made in the EQA report for amendments to the design to lessen the impact for consideration by the Committee. 18. These accessibility considerations will make it comparatively easier to use the proposed crossing point than many others in the area. This is important to note, because in order to arrive at Harding's Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Harding's Way. The proposed Traffic Regulation Order does not relate to any housing proposal. The planning permission to which the proposed amendment refers, is for three new accesses along Hardings Way and relocation of a bus gate. What those accesses may serve in the future has not been identified as part of this process, and should any applications come forward in the future, they will be dealt with by the Local Planning Authority (King's Lynn and West Norfolk Borough Council) through the approve planning process in the normal manner.</p>	18 May 2018
22)	Resident 10	<p><b>Consultee Comment</b> Is against the opening of Hardings Way to traffic and the Hardings Way south traffic order. Says this would devastate this lovely area and be a terrible problem for people in wheelchairs and children for the pollution it causes. Walks her dog everyday on the river bank as it is the only pollution free area and as she is nearly 80 years old, needs this as everyone else does.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving.</p>	18 May 2018
24)	Resident 12	<p><b>Consultee Comment</b> Uses the Hardings Way pathway everyday to and from work and also to collect grandson from his school at Whitefriars. At present, it is a quiet safe walk for school run and many children uses it. There are plenty of young children accompanying parents with buggies, riding bikes or as they get a little older, it is a chance to gain a little independence walking to and from school alone. Says opening up the bus lane would destroy this small road which would not take additional traffic as it will cause accidents. Adds, even a small access would increase danger to the pedestrian public. Says Hardings Pits area is an open space for many children in the area who have no gardens or only backyards. Although, the walks are not far, the road they would need to cross is full of heavy traffic, even with its crossings. Adds, Hardings Pits is a wild space for children to explore nature and enjoy freedom that is often denied them in this modern age. Feels very strongly that opening the bus lane is the wrong thing for local people.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain.</p>	18 May 2018
25)	Resident 13	<p><b>Consultee Comment</b> Requests not to open Hardings Way South Lynn to traffic as lives along Wisbech Road and do have enough traffic come along already, some days it is queued right back along the cut Bridge plus it would not be good for children who have to walk along there to the school. Adds, she has always lived in South Lynn and a lot of children play along there and does not wish for any more traffic to come along Wisbech as damage was done to her own house since December. Says a lot of lorries have been coming along Wisbech Road in the early morning and late night causing damage to her house. Have talked to other people who lives in Wisbech Road and most of the people had damage done to their homes as well like cracks in the walls. Had someone from Highways to look at the damage the Road has caused since Dec 2017. Cllr Alexandra Kemp has been out to look at the damage caused by heavy lorries coming along and now she has got the highways to resurface the road but not till August which means she cannot get the house fixed until then. Her neighbour at 105 had the survey done to her house as she thought it was sub-siding however the survey concluded it was due to the heavy lorries coming to Wisbech Road.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. The advertised Traffic Regulation Order is to make Harding's Way open to all traffic for a length of 125 metres from its junction with Wisbech Road. This proposal does not seek to allow any access to Boal Quay to the north (Concern raised by objector). It is worth noting that the number of HGV's is likely to be low and following implementation of the new access point to the Overton's site from Harding's Way, traffic movements from the existing access/egress arrangement on Wisbech Road should be significantly reduced, particularly for large vehicles. The HGV movements will also be safer under signal control rather than the current merge with traffic. A reduction in movements at the existing location will benefit users of the shared use facility on Wisbech Road as there will be reduced conflict. The damage referenced by the objector was due to Wisbech Road being used as a diversion during works on the A47 and is not a normal occurrence.</p>	18 May 2018
26)	Resident 14	<p><b>Consultee Comment</b> Lives at 99 Wisbech Road South Lynn and objects to Hardings Way South Traffic Order as more traffic will use Wisbech Road as a shortcut if Hardings Way South and then all of Hardings Way is opened to general traffic and HGVs. Says her house shakes when the lorries go by and Wisbech Road has cracked up in the last 6 months because of traffic diversion in Saddlebow Interchange and is being completely resurfaced. Says cracks have appeared on the outside of her house and at her neighbours. States he has bought her own house and did not expect the council to come up with a plan like this and is also really worried about the children's walk to school.</p> <p><b>NCC Officer Comments</b> The advertised Traffic Regulation Order is to make Harding's Way open to all traffic for a length of 125 metres from its junction with Wisbech Road. This proposal does not seek to allow any access to Boal Quay to the north (Concern raised by objector). It is worth noting that the number of HGV's is likely to be low and following implementation of the new access point to the Overton's site from Harding's Way, traffic movements from the existing access/egress arrangement on Wisbech Road should be significantly reduced, particularly for large vehicles. The HGV movements will also be safer under signal control rather than the current merge with traffic. A reduction in movements at the existing location will benefit users of the shared use facility on Wisbech Road as there will be reduced conflict. The damage referenced by the objector was due to Wisbech Road being used as a diversion during works on the A47 and is not a normal occurrence. Any issues pertaining to the long term picture of Hardings Way are not subject to this amendment Order. This process seeks to relocate the existing bus gate 15m north from its current location and change the existing bus and cycle only Order to all traffic between the relocated bus gate and Wisbech Road only.</p>	18 May 2018
27)	Resident 15	<p><b>Consultee Comment</b> States he was head teacher at Whitefriars Primary School when NCC initially proposed a link road joining Wisbech Road to the town centre which ran adjacent to the school. Had to meetings with representatives from NCC to discuss the proposal. One of the representative Quentin Brogdale reassured governors at the school that the road would be a bus lane only and that there would be no possibility of the road being opened to public vehicle use. Says they accepted this assurance and therefore gave no objections to the scheme. Totally opposes to the proposed opening of the link road to public vehicular access for the following reasons: it goes totally against assurances from NCC that the road would be a bus lane only, the development of the area threatens the Hardings Pits environment (one of the very few natural environments in and around King's Lynn), increased vehicular access would expose pupils and staffs at Whitefriars to increased air pollution, there is considerable pedestrian and cycle traffic along this route including families attending Whitefriars, traffic that can travel safely and with no impact to the environment, increased vehicle use would prevent the safe pedestrian/cycle access. Earnestly hopes the committee will reject the opening of the link road to public vehicle access.</p> <p><b>NCC Officer Approval</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Any issues pertaining to the long term picture of Hardings Way are not subject to this amendment Order. This process seeks to relocate the existing bus gate 15m north from its current location and change the existing bus and cycle only Order to all traffic between the relocated bus gate and Wisbech Road only.</p>	18 May 2018
28)	Resident 16	<p><b>Consultee Comment</b> Says his particular earnest concern and objection to the Hardings Way South Traffic Order is the longer term picture for the whole length of Hardings Way to be opened to all traffic. At which time, it will act as a magnet for all vehicles accessing the north end of the town centre via South Quay. Adds, it has been a long term objective of both the borough and County Councils to protect the historic riverside quarter of the town as a prime visitor attraction and as a quiet amenity area for all.</p> <p><b>NCC Officer Comments</b> Any issues pertaining to the long term picture of Hardings Way are not subject to this amendment Order. This process seeks to relocate the existing bus gate 15m north from its current location and change the existing bus and cycle only Order to all traffic between the relocated bus gate and Wisbech Road only.</p>	18 May 2018
		<p><b>Consultee Comment</b> Thinks the new road scheme for South Lynn Harding's Way is a move for the worse. Says it is safe way to the schools and disabled access to town also not to forget pollution and greenbelt. Adds, it will not ease congestion on London road, it will make the South Gate roundabout even worse the access to Wisbech Road just a crazy idea.</p>	

29)	Resident 17	<p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving. An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Harding's Way. However, it is only likely to have a significant detrimental impact on disabled pedestrians – specifically blind and visually impaired people, people with multi-sensory impairments (e.g. people who are blind and deaf), and people with mobility impairments. This may include older people, who may not consider themselves disabled, but whom have age-related health conditions or mobility issues that affect their ability to get about. Recommendations are made in the EQA report for amendments to the design to lessen the impact for consideration by the Committee. 18. These accessibility considerations will make it comparatively easier to use the proposed crossing point than many others in the area. This is important to note, because in order to arrive at Harding's Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Harding's Way. The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The approved scheme which relocates the bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north towards Hardings Pits is maintained. Apart from the relocation of fencing, there are no proposed works in the immediate vicinity of Hardings Pit that would affect the green space and wildlife. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal.</p>	18 May 2018
30)	Resident 18	<p><b>Consultee Comment</b> Wants to keep Hardings Way South free from motor vehicles. <b>NCC Officer Comments</b> Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain.</p>	18 May 2018
31)	Resident 19	<p><b>Consultee Comment</b> Wants to keep Hardings Way South free from traffic. Says it is a lovely walk into town so peaceful and fume free. <b>NCC Officer Comments</b> Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain.</p>	18 May 2018
32)	Resident 20	<p><b>Consultee Comment</b> Objects very strongly to Hardings Way being opened to general traffic as she feels that this would have detrimental effect on community's quality of life. Demands that the Hardings Way South Traffic order is not passed as this would be the first step to opening the whole of Harding's Way. Currently the area around Hardings Way is a pleasant, peaceful environment for local residents and visitors. Many people use the area for walking and cycling, enjoying the opportunity to get some exercise and to socialise. Many local children also use this route to walk to and from several local schools. Continues, opening Hardings Way to general traffic would increase the risk of road traffic accidents. At the moment it can be quite hard for a pedestrian to cross the junction with Boal Street and Church Street (at the junction with Boal Street and Stonegate Street), some motorists seem to behave very inconsiderately and it will only get worse if Hardings Way was opened to general traffic. Concerned for the health of local children in particular as increased traffic inevitably causes more air pollution. The Hillington square and Friars area is quite densely populated and residents need green space to improve air quality not more traffic to reduce it. Says, there would be an increase in noise pollution spoiling the leisure opportunities in the area. People would not be able to sit enjoying the peace on the seats by the Carmelite arch and would be less likely to stop for a chat with their neighbours. It would also make access to the Nar Valley less attractive. Appreciates that the authorities are under pressure to solve the problems of traffic congestion but creating more roads is not really a solution; more roads seems to create more traffic. States people want the convenience of their cars but inconvenience of traffic congestion is unavoidable. Only way to solve the problem in the long term is to promote alternatives such as public transport, walking, cycling and car-sharing. Creating new roads only reinforces the mind-set that people need their own cars for all their journeys. Since moving to this area, have been pleased to find a friendly neighbourhood, the Hardings Way green space and the recent improvements to Hillington Square help to make it a nice place to live. Hopes that the health and welfare of a relatively less affluent, densely populated community will not be sacrificed for the convenience of motorists who are perhaps more affluent who perhaps live in less densely populated areas. Thanks for consideration.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Harding's Way. However, it is only likely to have a significant detrimental impact on disabled pedestrians – specifically blind and visually impaired people, people with multi-sensory impairments (e.g. people who are blind and deaf), and people with mobility impairments. This may include older people, who may not consider themselves disabled, but whom have age-related health conditions or mobility issues that affect their ability to get about. Recommendations are made in the EQA report for amendments to the design to lessen the impact for consideration by the Committee. 18. These accessibility considerations will make it comparatively easier to use the proposed crossing point than many others in the area. This is important to note, because in order to arrive at Harding's Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Harding's Way. The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The approved scheme which relocates the bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north towards Hardings Pits is maintained. Apart from the relocation of fencing, there are no proposed works in the immediate vicinity of Hardings Pit that would affect the green space and wildlife. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal. Any planning application that may come forward on land adjacent to Hardings Way that would be serviced by the new accesses, will be subject to a Transport Assessment (TA) (depending on the scale of development, a Transport Statement is a simplified alternative for smaller developments). A TA is submitted to ensure that issues such as how travel may be minimised, how best use of the existing transport infrastructure can be made, addressing potential impacts of traffic generated by the proposal to protect the travelling public, improvements to sustainable travel choices and other measures that may assist in influencing travel behaviours. This process should help address the concerns associated to this objection</p>	18 May 2018
33)	Resident 21	<p><b>Consultee Comment</b> Objects to the proposal to allow cars onto the cycle route that runs over Hardings Pits in Kings Lynn for the following reasons; Safety: this route is used by children and cyclists to get to destination both into and out of the town centre without the issues created by traffic and to feel safe. More families will drive their children to school once it becomes too dangerous to walk affecting the health and wellbeing of residents. The point at which the bridge crosses the Nar is too narrow for vehicles moving in two directions and pedestrians and cycle. Cycling should be encouraged as a viable alternate to driving for environmental and health reasons. Also, the visibility on that portion of the route is very poor - it is not always possible to see double decker buses approaching the town because of the height of the bank and as the bank is flood defence it cannot be removed. Environment: this is a beautiful area for children, dog walkers, cyclists, ramblers, gear runners and maybe even tourists to walk through. It is full of wildlife, deer and foxes, all manner of birds and small mammals. pollution levels are high in areas such as London Road because of the traffic - Lynn needs areas where pollution is not high and can enjoy living here. The trees and vegetation help absorb the carbon dioxide and give out oxygen. The children at Whitefriars currently have a clean safe school field with no pollution - a road will produce pollution that will affect the children's health. Doorstep green: this area was designated a doorstep green which means that money was paid by the Countryside agency and New Opportunities Fund to keep the area accessible to the local populace, allowing enjoyment of a green space which was a legal agreement with The Countryside Agency.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. This process should help address the concerns associated to this objection</p>	18 May 2018

34)	Resident 22	<p><b>Consultee Comment</b> Objects to the Harding's Way South Traffic Order because the 3 new accesses will put noisy + intimidating HGVs onto Hardings Way South going to Overtons (coach works) and states there will be 90 parking spaces on the new development which would mean general traffic and HGVs would hustle past pedestrians and worse till could 'suck' cyclists into their ride or the path of an oncoming vehicle. Also, says buggies will have to cross the side roads west, in competition with general traffic entering + leaving the western access. There is also additional pollution. Adds, some people cannot use London Road because of the existing pollution there + rely on Harding's Way South (especially thinking of the asthmatic disabled people). Removing the only safe route to King's Lynn, via Harding's Way South, would cause huge detriment to the disabled + elderly who are so reliant on it + take their independence.</p> <p><b>NCC Officer Comments</b> The advertised Traffic Regulation Order is to make Harding's Way open to all traffic for a length of 125 metres from its junction with Wisbech Road. This proposal does not seek to allow any access to Boal Quay to the north (Concern raised by objector). It is worth noting that the number of HGV's is likely to be low and following implementation of the new access point to the Overton's site from Harding's Way, traffic movements from the existing access/egress arrangement on Wisbech Road should be significantly reduced, particularly for large vehicles. A reduction in movements at the existing location will benefit users of the shared use facility on Wisbech Road as there will be reduced conflict. This is important to note, because in order to arrive at Harding's Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Harding's Way.</p>	18 May 2018
35)	Resident 23	<p><b>Consultee Comment</b> Objects to this and urges not to pass this order. Says this proposal to open Harding's Way South to all traffic is a seriously retrograde step - not only for the population in the immediate locality but for the future transport improvement strategy for wider King's Lynn and surrounding area. Lynn does not have a Town council, the views of King's Lynn Civic Society who have the interests of the whole town at heart must be listened to. Adds, the proposal will not do a thing to solve the town's congestion problems because traffic diverted along Harding's Way would make new bottlenecks at Millfleet on inward journeys and South Lynn Outwards. If you approve this for Harding's Way South, it will inevitably begin the opening up to all traffic for the whole of Harding's Way. Continues, other reasons why all motor traffic should not be allowed are:- (1) It will make the area less safe for all the cyclists, walkers and mobility-scooter users who use this route. Even those who use mobility-scooters and live at the Hardwick Road (residential) caravan site, for example, negotiate Harding's Way into Town, instead of using London Road. (2) It will be bad for children attending Whitefriars School, exposing them to greater danger, noise and pollution. Furthermore, the governors of the school were assured in the past by an officer of the County Council that this would not happen. (3) It will destroy the peaceful enjoyment by over 6,000 local people of the beautiful area called Harding's Pits (the doorstep green) by the river. It is a much loved local nature area which is also a tourist draw close to the centre of town. Please don't ruin it.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving. An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Harding's Way. However, it is only likely to have a significant detrimental impact on disabled pedestrians – specifically blind and visually impaired people, people with multi-sensory impairments (e.g. people who are blind and deaf), and people with mobility impairments. This may include older people, who may not consider themselves disabled, but whom have age-related health conditions or mobility issues that affect their ability to get about. Recommendations are made in the EQA report for amendments to the design to lessen the impact for consideration by the Committee. 18. These accessibility considerations will make it comparatively easier to use the proposed crossing point than many others in the area. This is important to note, because in order to arrive at Harding's Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Harding's Way. The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The approved scheme which relocates the bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north towards Hardings Pits is maintained. Apart from the relocation of fencing, there are no proposed works in the immediate vicinity of Hardings Pit that would affect the green space and wildlife. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal. An NCC officer did previously state that he believed that it would be unsafe for Hardings Way to be opened up to all traffic. Although we are not able to prove definitively in either way, we are confident that those comments were made in connection to crossing of the River Nar at the existing sluice along Hardings Way. It is not possible for two larger vehicles to pass safely at this point due to the restricted width, proximity of the structure and alignment, therefore completely opening Hardings Way to all traffic (without any restriction over the sluice) between Boal Quay and Wisbech Road with its current alignment would not be achievable. However, this proposal does not seek to open the full extent of Hardings Way to all traffic, so the historical comment is not in keeping with this proposal.</p>	18 May 2018
36)	Resident 24	<p><b>Consultee Comment</b> Writes to voice objection to the proposed opening South Hardings Way to traffic. It will be bad for school children, increased noise, pollution and also ruin the peaceful countryside area, which they love and are so lucky to be so near.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal.</p>	18 May 2018
37)	Resident 25	<p><b>Consultee Comment</b> Wishes to object to any change or modification to the current layout and organisation of the South-Eastern end of Hardings Way for the following reasons: (1) Currently experiences slow or stationary traffic during commute into Lynn via Wisbech Road which starts at the Harding's Way junctions. Increasing traffic through these lights will cause a further impact to this. (2) Only busses can currently use Harding's Way. Allowing all forms of Traffic onto it - even by moving the bus gate alone will create a hazard to cyclists and pedestrians alike. (3) Worries that this proposal is the thin end of the wedge and thus set a precedent for future changes. (4) Hardings Pits are a much appreciated local green space. They should be defended from development in all forms.</p> <p><b>NCC Officer Comments</b> Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain. The proposal will not affect the existing bus service. Any issues pertaining to the long term picture of Hardings Way are not subject to this amendment Order. This process seeks to relocate the existing bus gate 15m north from its current location and change the existing bus and cycle only Order to all traffic between the relocated bus gate and Wisbech Road only. The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The approved scheme which relocates the bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north towards Hardings Pits is maintained. Apart from the relocation of fencing, there are no proposed works in the immediate vicinity of Hardings Pit that would affect the green space and wildlife. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal.</p>	18 May 2018
38)	Resident 26	<p><b>Consultee Comment</b> Does not want any traffic on Harding's Way South, only buses and cycles and also does not want houses there. Says the council has built more than enough on NORA. Because of the increase in traffic on Wisbech Road since Highways England have been repairing the Hardwick Bridge, Wisbech Road has been severely damaged and has cracks appearing inside and outside of his house as a result. Along with his wife, wants to take action against the Highways because of this.</p> <p><b>NCC Officer Comments</b> The advertised Traffic Regulation Order is to make Harding's Way open to all traffic for a length of 125 metres from its junction with Wisbech Road. This proposal does not seek to allow any access to Boal Quay to the north (Concern raised by objector). It is worth noting that the number of HGV's is likely to be low and following implementation of the new access point to the Overton's site from Harding's Way, traffic movements from the existing access/egress arrangement on Wisbech Road should be significantly reduced, particularly for large vehicles. The HGV movements will also be safer under signal control rather than the current merge with traffic. A reduction in movements at the existing location will benefit users of the shared use facility on Wisbech Road as there will be reduced conflict. The damage referenced by the objector was due to Wisbech Road being used as a diversion during works on the A47 and is not a normal occurrence. Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain.</p>	18 May 2018
39)	Resident 27	<p><b>Consultee Comment</b> Objects to the South Lynn Hardings Way Traffic Order for what he feels are excellent reasons. Says the opening of the road would not have any positive benefits and make put traffic noise and congestion onto a quiet rural spot and affect the riverside which is unique and of national historic importance.</p> <p><b>NCC Officer Comments</b> Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain.</p>	18 May 2018
		<p><b>Consultee Comment</b> Opposed to Hardings Way South Traffic Order because thinks it should be left as it is. Greenspace should be left to nature. Adds, there are enough houses being built in NORA but this traffic order will build 2 new roads for 50 new houses with 90 parking spaces.</p>	

40)	Resident 28	<p><b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The approved scheme which relocates the bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north towards Hardings Pits is maintained. Apart from the relocation of fencing, there are no proposed works in the immediate vicinity of Hardings Pit that would affect the green space and wildlife. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal. The proposed Traffic Regulation Order does not relate to any housing proposal. The planning permission to which the proposed amendment refers, is for three new accesses along Hardings Way and relocation of a bus gate. What those accesses may serve in the future has not been identified as part of this process, and should any applications come forward in the future, they will be dealt with by the Local Planning Authority (King's Lynn and West Norfolk Borough Council) through the approved planning process in the normal manner.</p>	18 May 2018
41)	Resident 29	<p><b>Consultee Comment</b> Is horrified by the prospect of the destruction of natural riverside heritage, behind which is a Doorstep Green covered by a covenant. Says the area at present is well used by walkers, cyclists, school children and disabled. Building of the bus lane has only destroyed a small park of this beautiful part of King's Lynn. Adds, to build a road open to all traffic would be the thin edge of the wedge and within a short time our green space would be lost forever. States most forward thinking Councils are finding ways of stopping traffic going into town centres. Says you seem to be trying to cause congestion and pollution.</p> <p><b>NCC Officer Comments</b> Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Hardings Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Hardings Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving. The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The approved scheme which relocates the bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north towards Hardings Pits is maintained. Apart from the relocation of fencing, there are no proposed works in the immediate vicinity of Hardings Pit that would affect the green space and wildlife. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal.</p>	18 May 2018
42)	Resident 30	<p><b>Consultee Comment</b> Writes to protest about the proposal to open Hardings Way South to all traffic and to build houses on 'Our Doorstep Green'. This will increase rather than decrease pollution and provide a short cut i.e. a rat run for traffic from Wisbech Road into town. Traffic density will also increase on Wisbech Road. Says a recent study has shown that housebuilding on recreational areas and parks causes further pollution and is a risk to health particularly to children whose route to school is therefore at risk. Also, people using mobility scooters are vulnerable as their peaceful route to town is under threat and this also applies to walkers. Therefore, submits that the resolution to not open up Hardings Way South on July 6th. Adds, it is obvious that it will be only a matter of time before the rest of Hardings Way is similarly treated.</p> <p><b>NCC Officer Comments</b> The proposed Traffic Regulation Order does not relate to any housing proposal. The planning permission to which the proposed amendment refers, is for three new accesses along Hardings Way and relocation of a bus gate. What those accesses may serve in the future has not been identified as part of this process, and should any applications come forward in the future, they will be dealt with by the Local Planning Authority (King's Lynn and West Norfolk Borough Council) through the approved planning process in the normal manner. Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Hardings Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Hardings Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving. Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain. An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Hardings Way. However, it is only likely to have a significant detrimental impact on disabled pedestrians – specifically blind and visually impaired people, people with multi-sensory impairments (e.g. people who are blind and deaf), and people with mobility impairments. This may include older people, who may not consider themselves disabled, but whom have age-related health conditions or mobility issues that affect their ability to get about. Recommendations are made in the EQA report for amendments to the design to lessen the impact for consideration by the Committee. 18. These accessibility considerations will make it comparatively easier to use the proposed crossing point than many others in the area. This is important to note, because in order to arrive at Hardings Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Hardings Way. Any issues pertaining to the long term picture of Hardings Way are not subject to this amendment Order. This process seeks to relocate the existing bus gate 15m north from its current location and change the existing bus and cycle only Order to all traffic between the relocated bus gate and Wisbech Road only.</p>	18 May 2018
43)	Resident 31	<p><b>Consultee Comment</b> States have lived in south Lynn for almost 50 years and is opposed to the plans to open up Hardings Way to all traffic. Sometimes uses the route to walk into town. Says it is one of very few routes that you can peacefully walk into town. Feels this area should be enhanced further for pedestrians and cyclists. And, on a nice day you can walk this route and see the children playing at Whitefriars School safe in knowledge that the school and children are not near heavy traffic, so they can breath relatively clean air and are protected from road traffic accidents. Hardings Way is used by most South Lynn parents to walk their children to school not only to Whitefriars but many use this route to get to Greyfriars School too. So avoiding the busy London Road. Says, the area known as Hardings Pits (Hardings Way) need to be enhanced more tranquilly not turned into a polluting road with heavy traffic.</p> <p><b>NCC Officer Comments</b> Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Hardings Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Hardings Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving. The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain.</p>	18 May 2018
44)	Resident 32	<p><b>Consultee Comment</b> Opposes to Hardings Way South Traffic Order because have lived in South Lynn all life and Overtons should not be allowed to have a special access to bring their coaches and HGVs onto Hardings Way South. Says, this will bring noise, dust and pollution next to where he lives. already has dust and noise problems with the pollution rising in the air from the works already. This is too much.</p> <p><b>NCC Officer Comments</b> Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Hardings Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Hardings Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving.</p>	18 May 2018
45)	Resident 33	<p><b>Consultee Comment</b> School children's safety and increased noise and environmental concerns for Hardings Way.</p> <p><b>NCC Officer Comments</b> Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Hardings Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Hardings Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving.</p>	18 May 2018
46)	Resident 34	<p><b>Consultee Comment</b> Requests not to make Hardings Way south Traffic Order. Says this won't be a solution to the traffic problem, but it will increase congestion. Just changing London Road in the last 2 weeks has caused tailbacks on Wisbech Road. Hardings Way South should not have any traffic on it. It should not have anything there. It should be left as a green space for the benefit of residents and it is a nice place for kids to play on.</p> <p><b>NCC Officer Comments</b> Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain.</p>	18 May 2018
		<p><b>Consultee Comment</b> Writes to tell how important it is to keep the current restricted use on Hardings Way. Does not have a car and so usual way into town is either by bicycle or by walking. Says at the moment it is safe, unpolluted and quiet with only the occasional bus passing. It is this mode of transport which the Council ought to be promoting - the more successful it was the less congestion there would be on roads such as London Road. Says, the Council should study cities such as Copenhagen and Madrid formerly heavily congested which have made major improvements by actively encouraging safe ways for people to walk and cycle. Although, grandchildren do not live in the Borough, certainly would be worried if they had to attend school under the conditions which the children at Whitefriars would face if all motor traffic were allowed on Hardings Way. As a matter of fact, grandchildren do come to Lynn each summer and says going blackberrying on Hardings Pits is one of the great attractions for them and enjoy the peace and quiet which currently obtains over the area. Adds, you may be aware that a recent report on air pollution pointed out that major problems exist not only in the big cities but also in quite small towns. The pollution on London Road has been at illegal levels for many years and thinks that any attempt to 'deal' with it by, diverting traffic away from the monitors and along Hardings Way would be unacceptable and would likely to be subject to legal challenge. the only way to protect the people of Lynn is to find less polluting ways of getting around. Suggests a policy of actively encouraging people to cycle and walk (this would also improve the health of people) and to improve public transport, including, park and ride schemes. Says, this is the way progressive cities are moving and Norfolk County council would be well advised to learn from them.</p>	

47)	Resident 35	<p><b>NCC Officer Comments</b> Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving. The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Any planning application that may come forward on land adjacent to Hardings Way that would be serviced by the new accesses, will be subject to a Transport Assessment (TA) (depending on the scale of development, a Transport Statement is a simplified alternative for smaller developments). A TA is submitted to ensure that issues such as how travel may be minimised, how best use of the existing transport infrastructure can be made, addressing potential impacts of traffic generated by the proposal to protect the travelling public, improvements to sustainable travel choices and other measures that may assist in influencing travel behaviours. This process should help address the concerns associated to this objection.</p>	18 May 2018
48)	Resident 36	<p><b>Consultee Comment</b> Would like to express some views on the above and associated matters on the light of public disquiet. Firstly the question of the Hardings Way bus lane. When this was first envisaged, one of the reasons given for its construction was to ease pollution in London Road, inferring that this was caused mainly by buses - a very spurious argument. The intention was that all buses should use the busway as is confirmed by the road markings at the beginning of the busway on Wisbech Road although this deprives London Road residents of public transport facilities. In practice only buses from the West use the busway, those from the East continuing to use London Road. Says, we now have the suggestion that, by opening up Hardings Way to all traffic, this will ease the London Road pollution. Surely it will merely transfer it and what is more, will increase traffic on Wisbech Road as Hardings Way will be seen as a 'rat-run' - a quick way into town? Adds, now we have the latest London Road experiment which achieves absolutely nothing other than to deny users of Vallingers Road access to London Road. Surely too, it is obvious that there are two heavy traffic flows in a day, in to town in the morning and out in the late afternoon/early evening so why only cater for one time and direction. Asks, could not have consideration been given to making London road a three lane highway throughout with alternate traffic light control so allowing two lanes in the morning rush and two lanes out in the evening. This system works in a number of urban areas quite successfully. The reason for dwelling on this is that, suspects that the present London Road experiment is a red herring, making a case for traffic free all on Hardings Way when it fails as suspects it already has. Secondly, the construction of houses on what is now the Hardings Pits Doorstep Green. A recent scientific study has revealed that building estates on what have been recreational areas rapidly pollutes those areas and thus deprives local residents, particularly children, of the benefits of open recreational spaces, which are designed for that very purpose. The study was directed mainly at public parks and school playing fields which are under threat from development. Says, Hardings Pits must enter this category however as it is a haven for wildlife and ticks all the boxes of an essential recreational area. It must not be sacrificed. There is also possibility that the flood risk for the locality may, yet again, become apparent as global warming and rising sea levels continue.</p> <p><b>NCC Officer Comments</b> Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The approved scheme which relocates the bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north towards Hardings Pits is maintained. Apart from the relocation of fencing, there are no proposed works in the immediate vicinity of Hardings Pit that would affect the green space and wildlife. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal.</p>	18 May 2018
49)	Resident 37	<p><b>Consultee Comment</b> Opposes to the opening of Hardings Way to motor traffic. Says currently walks along this route most days to work in King's Lynn. The route is currently very pleasant + reasonably safe for cyclists and pedestrians. Plans on moving into King's Lynn and hopes to live in south so would use the route on an even more regular basis. opening up to route to traffic would lead to increase air pollution, all the impacts that this has on health. Was under the impression that funding had initially been granted for a cycle route would this funding need to be repaid. Sincerely hopes that council rethinks its policy on this.</p> <p><b>NCC Officer Comments</b> Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving.</p>	18 May 2018
50)	Resident 38	<p><b>Consultee Comment</b> Lives in the meeting house (Quakers) and when heard about the plan to open the bus lane etc. to traffic 'cried'. Have mental health problems and require as a necessity fresh air, peace and quiet. Says the stink and noise will be extremely detrimental to her peace of mind and existence. Requests not to open Hardings Way South to traffic. Says 'your lying and obfuscation is the same level as the levels of that in all corrupt regimes. Shame on you.'</p> <p><b>NCC Officer Comments</b> Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving.</p>	18 May 2018
51)	Resident 39	<p><b>Consultee Comment</b> Pleads that the cycle way remains closed to all traffic apart from buses. Opening it to all traffic solves nothing. There is no where for the traffic to go. The choice is to join London Road from Millfleet or drive along South Quay. Neither option reduces congestion and using South Quay as a ration will kill the business on the quayside and make redevelopment unattractive. The difficulties of maintaining the town flood defences is a huge barrier to developers, add in a very busy road and any interest will rapidly dwindle. The core of the traffic problem is broadening of the town to the west by the river. A new bridge to take all traffic from the west over the river and port is the only long term possible solution. The Borough of County Councils need to start working towards this now. Reduction in the volume of traffic entering the town can only be effected by the provision of efficient local bus services that are cheaper than parking charges. A rail link of any kind to Hunstanton would ease some pressure from the west. All further building of housing needs to be halted until a new traffic system is designed and in place. Knight's Hill: Speeding of the throughput of traffic here will ease the congestion on London road and Railway Road. Filter lanes for simple left turns will reduce pressure here. The stretch of road from the Port to roundabout needs to include bus lanes for faster transport from Knight's Hill and the Wootton's into and out of town. A faster designated route for buses entering town along John Kennedy Road to the bus station needs to be designed. The long slow slog around Lidl and Blackfriars Road must be eliminated for buses with the development of a bus only approach from Railway Road to the bus station. A radical rethink is necessary to give buses priority throughout town. Southgate: A left filter lane from Guanock Road is required and the Southgate itself needs to be protected from the bulk of vehicular traffic. Hardwick (Southgate): The only long-term solution is another bridge. Hardings Way: The many very real reasons to keep Hardings Way safe will be listed in other letters. Wants to offer some ways forward. None are 'simple' and some are radical but the search for a long term solution are long overdue.</p> <p><b>NCC Officer Comments</b> Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain</p>	18 May 2018
52)	Resident 40	<p><b>Consultee Comment</b> States the main reason why the council changed Hardings Way Road to a bus and bicycle ONLY Road and King's Lynn Norfolk England now has traffic problems. Questions how the traffic problems can be solved and at the same time keep pollution, climate change, global warming down. The reason why King's Lynn is having Traffic problems is that the council is building housing in the wrong places and does not look at the infrastructure that is needed for housing and what problems building houses causes. Says now council Leader Brian Long and the Council wants to Turn this road for All traffic, when Council Leader Brian Long in 2014 when he was Deputy leader and the Council was concerned about the fast growing of the killer of air pollution on this road. Can read this in the newspaper article below what happened in 2014. EDP Newspaper (Eastern Daily Press) Article 2014: "Air pollution at Dangerous Levels in Parts of King's Lynn, warns Report" Nitrogen dioxide levels in parts of the town are currently High enough to cause a serious risk to health warns a new report. The report to West Norfolk Councillors states: "Air pollution can make our Environment LESS attractive and can have Serious Effects on Health. We are aiming to Reduce Air Pollution to levels that don't cause a risk to human health". Proposals include altering road layouts to improve congestion on busy streets in South Lynn and Gaywood and creating a bus lane from Wisbech Road to Boal Street. Officials say the aim is to encourage more people to park in West Lynn and catch the ferry and residents only parking in town centre streets to discourage commuters from using them for free parking. Brian Long, Deputy Leader of the council said: "The current levels are not good enough, so it's important we do all we can to make King's Lynn a more environmentally friendly place to work and live". County Councillor Alexandra Kemp, who represents South Lynn said: "It is essential we start getting more people to walk to work, to use a bicycle or get the ferry from West-Lynn". Figures produced by Public Health England link 29,000 deaths in the UK each year to air pollution. Other proposals include special traffic controls at main junctions to reduce stop and start driving, improve traffic flow and reduce emissions. A new bus-only lane from Wisbech Road, through the Friars to Boal Street could be used by other vehicles such as taxis. Residents only parking is also being considered in the town centre to encourage visitors and workers to use public car parks, rather than residential streets. Car parking charges will be investigated with the aim of evening out peak travel times while also making short trips easy. Councillors on the Regeneration, Environment and Community Panel discuss the report in 2014. Which Hardings Way "Only Bus and Bicycle Road" was passed by the Council in 2014. Says, the main ways the killing air pollution increases is by us humans. So, why is Council Leader Brian Long and the Council, now changing Harding's Way Road back into a Killing Air Pollution Road in 2018? When in 2014 when Council Leader Brian Long was Deputy Leader "He was concerned more about the killer of pollution on this same road"?? this doesn't make any sense of what council leader Brian Long and the Council wants to increase the killing of air pollution is to brag to the head government that King's Lynn is building more housing like the head government told them to do, but Council Leader Brian Long is going about it in the wrong way of bring back the killer of air pollution. That building more houses causes more traffic problems of the killer air pollution. Housing should be built in the right places with the right infrastructure. And it will cost our Borough of King's Lynn and West Norfolk thousands of pounds more to change the road back into an air polluting road, which the council does not have any money to this, when there are many cuts NHS, Transport, Education, etc.</p> <p><b>NCC Officer Comments</b> Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving. The proposed Traffic Regulation Order does not relate to any housing proposal. The planning permission to which the proposed amendment refers, is for three new accesses along Hardings Way and relocation of a bus gate. What those accesses may serve in the future has not been identified as part of this process, and should any applications come forward in the future, they will be dealt with by the Local Planning Authority (King's Lynn and West Norfolk Borough Council) through the approve planning process in the normal manner.</p>	18 May 2018

53)	Resident 41	<p><b>Consultee Comment</b> Has been a South Lynn resident all life but now is in wheelchair due to a stroke 13 years ago and uses Hardings Way south most days as finds it safe to go to town that way. So, does not wish for Hardings Way to be open to a lot of traffic as would find it very difficult with mobility scooter as well. It is a lovely open area as well, so does not wish heavy traffic to come that way.</p> <p><b>NCC Officer Comments</b> An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Harding's Way. However, it is only likely to have a significant detrimental impact on disabled pedestrians – specifically blind and visually impaired people, people with multi-sensory impairments (e.g. people who are blind and deaf), and people with mobility impairments. This may include older people, who may not consider themselves disabled, but whom have age-related health conditions or mobility issues that affect their ability to get about. Recommendations are made in the EQA report for amendments to the design to lessen the impact for consideration by the Committee. 18. These accessibility considerations will make it comparatively easier to use the proposed crossing point than many others in the area. This is important to note, because in order to arrive at Harding's Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Harding's Way. Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain</p>	18 May 2018
54)	Resident 42	<p><b>Consultee Comment</b> Objects to the Hardings Way South traffic order south in full support of keeping this area traffic free, regularly walks and cycles in the area and feels opening this up to all traffic would be very detrimental to a peaceful and safe place for children and adults to enjoy. It is also regularly used by local schools for nature walks and as a safer route to walk pupils into the town centre. Appreciates taking their view into consideration.</p> <p><b>NCC Officer Comments</b> Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain. The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility.</p>	18 May 2018
55)	Resident 43	<p><b>Consultee Comment</b> Lives along Wisbech Road and has done for many years. Says the traffic is getting worse plus with heavy lorries coming through causing damage to homes so does not wish for Hardings Way South to be open to traffic. Says "you need to find another solution" for all this traffic. Also adds, her grandchildren go to school along Hardings Way. (note: I Denise have written this letter on behalf of Ruth due to her arthritis in her hands plus she is 80 years old).</p> <p><b>NCC Officer Comments</b> Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain. The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. The advertised Traffic Regulation Order is to make Harding's Way open to all traffic for a length of 125 metres from its junction with Wisbech Road. This proposal does not seek to allow any access to Boal Quay to the north (Concern raised by objector). It is worth noting that the number of HGV's is likely to be low and following implementation of the new access point to the Overton's site from Harding's Way, traffic movements from the existing access/egress arrangement on Wisbech Road should be significantly reduced, particularly for large vehicles. The HGV movements will also be safer under signal control rather than the current merge with traffic. A reduction in movements at the existing location will benefit users of the shared use facility on Wisbech Road as there will be reduced conflict. The damage referenced by the objector was due to Wisbech Road being used as a diversion during works on the A47 and is not a normal occurrence.</p>	18 May 2018
56)	Resident 44	<p><b>Consultee Comment</b> Have been a resident on Wisbech Road for the past twenty six years and during that time have noticed a big impact to the traffic using this road. Feels opening the Hardings Way South would only increase traffic problems. Since the increase of traffic including heavy goods vehicles, have had exterior damage to property i.e. large cracks appearing on outer walls, bedroom ceilings, etc. Can feel the house shake laying in bed when lorries go by. Contacted insurance company because of cracks appearing in the house concerned had subsidence to the property. An engineer confirmed it was not the case. Therefore, strongly disagree to opening Hardings Way south as this will further damage people's property.</p> <p><b>NCC Officer Comments</b> The advertised Traffic Regulation Order is to make Harding's Way open to all traffic for a length of 125 metres from its junction with Wisbech Road. This proposal does not seek to allow any access to Boal Quay to the north (Concern raised by objector). Double yellow lines will remain.</p>	18 May 2018
58)	Resident 46	<p><b>Consultee Comment</b> Do not want Hardings Way south to open to any traffic making South Lynn worse than what it is now that the top end of Saddlebow Road is closed for few years now and what good has that done. The traffic just piles up along Wisbech Road. Now some days right back over the cut bridge heavy lorries 'need' to use the by-pass to get in town as well.</p> <p><b>NCC Officer Comments</b> Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process.</p>	18 May 2018
59)	Resident 47	<p><b>Consultee Comment</b> Does not wish for anymore traffic to use Hardings way South as it is only open space to walk.</p> <p><b>NCC Officers Comments</b> Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. Double yellow lines will remain.</p>	18 May 2018
60)	Resident 48	<p><b>Consultee Comment</b> Says he is carer for Mr. J Gray and visits him 3-4 times a day. It takes him up to 3/4 hour to get there at peak times. Some days it is even longer than this makes the day very long and make it late for hi other clients. Opening more roads up will only make things a lot worse.</p> <p><b>NCC Officer Comments</b> Although the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. The proposal is for formation of accesses only. The only access which will generate traffic as part of this scheme is the existing Overton's site which currently exists on Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure through the approved planning process. Double yellow lines will remain.</p>	18 May 2018
61)	Resident 49	<p><b>Consultee Comment</b> Does not wish for Hardings Way South Lynn to be opened to heavy traffic and lorries. Due to safety as walks that way most days so do a lot of school children.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. The advertised Traffic Regulation Order is to make Harding's Way open to all traffic for a length of 125 metres from its junction with Wisbech Road. It is worth noting that the number of HGV's is likely to be low and following implementation of the new access point to the Overton's site from Harding's Way, traffic movements from the existing access/egress arrangement on Wisbech Road should be significantly reduced, particularly for large vehicles. A reduction in movements at the existing location will benefit users of the shared use facility on Wisbech Road as there will be reduced conflict.</p>	18 May 2018
62)	Resident 50	<p><b>Consultee Comment</b> Does not think opening Hardings Way South to traffic is a good idea due to children going school that way plus that is only but decent land walk along and does not want spoil it with buildings and flats.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. The proposed Traffic Regulation Order does not relate to any housing proposal. The planning permission to which the proposed amendment refers, is for three new accesses along Hardings Way and relocation of a bus gate. What those accesses may serve in the future has not been identified as part of this process, and should any applications come forward in the future, they will be dealt with by the Local Planning Authority (King's Lynn and West Norfolk Borough Council) through the approve planning process in the normal manner</p>	18 May 2018
		<p><b>Consultee Comment</b> Has been a resident of South Lynn for 15 years. The traffic along Wisbech Road is horrendous it takes 10-15 minutes to cross the road, a few times own child has nearly been knocked down. The amount of vehicles has had a significant impact on the structure of his/her house as imagines it has other houses. Opening any other roads in or out of South Lynn would only heighten the massive problem that the residents already have.</p>	

63)	Resident 51	<p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. The advertised Traffic Regulation Order is to make Harding's Way open to all traffic for a length of 125 metres from its junction with Wisbech Road. This proposal does not seek to allow any access to Boal Quay to the north (Concern raised by objector). It is worth noting that the number of HGV's is likely to be low and following implementation of the new access point to the Overton's site from Harding's Way, traffic movements from the existing access/egress arrangement on Wisbech Road should be significantly reduced, particularly for large vehicles. The HGV movements will also be safer under signal control rather than the current merge with traffic. A reduction in movements at the existing location will benefit users of the shared use facility on Wisbech Road as there will be reduced conflict. The damage referenced by the objector was due to Wisbech Road being used as a diversion during works on the A47 and is not a normal occurrence.</p>	18 May 2018
64)	Resident 52	<p><b>Consultee Comment</b> Heard about the opening of bus lane to normal traffic. Feels for the children's safety near the school and thinks it would be ok if someone would be able to watch the children safely across the road near the school.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility.</p>	18 May 2018
65)	Resident 53	<p><b>Consultee Comment</b> Lived in 107 Wisbech Road with his mother for 20 years up till he moved out 7 years ago. In all the time living there, never felt any movement in the house. Visits mum every week from about December 2016 there has been a slight movement through the house and it has never stopped. In 2017 to 2018, the movement has got worse everyday shaking the house and causing slight damage to objects inside house. From November 2017, the house has been shaking so much day and nights every hour. Mainly due to large heavy lorries and the buses, plus extra traffic due to the closed bridge on and off Saddlebow Road by pass. It has caused structural house damage and will keep getting worse. The 'costs' getting higher. The insurance Co' blaming highways i.e. road need testing for sinkholes, resurfacing.</p> <p><b>NCC Officer Comments</b> The advertised Traffic Regulation Order is to make Harding's Way open to all traffic for a length of 125 metres from its junction with Wisbech Road. This proposal does not seek to allow any access to Boal Quay to the north (Concern raised by objector). It is worth noting that the number of HGV's is likely to be low and following implementation of the new access point to the Overton's site from Harding's Way, traffic movements from the existing access/egress arrangement on Wisbech Road should be significantly reduced, particularly for large vehicles. The HGV movements will also be safer under signal control rather than the current merge with traffic. A reduction in movements at the existing location will benefit users of the shared use facility on Wisbech Road as there will be reduced conflict. The damage referenced by the objector was due to Wisbech Road being used as a diversion during works on the A47 and is not a normal occurrence.</p>	18 May 2018
66)	Resident 54	<p><b>Consultee Comment</b> Wishes to register protest to the proposal to change the use of the above named Hardings Way from a Bus route to an all traffic way into the centre of King's Lynn. Says the area surrounding Hardings Way acts as a lung for parts of the town. At the moment the way is a pleasant cycle ride and walk into town. This will all change if it is made into an all traffic road. Air pollution will increase and affect the houses and school along its route, apart from the danger of vehicles in the vicinity of young children walking to school. According to the latest research air pollution can affect babies in the womb of pregnant mothers by increasing their blood pressure.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving.</p>	25 May 2018
67)	Resident 55	<p><b>Consultee Comment</b> Thinks it is absolutely appalling that the council is even considering the idea of opening the road. Says it is a tragedy awaiting to happen. Many children use this pathway to go to and from Whitefriars School, as the road used on the Southgates is dangerous and too narrow for them to walk down. Asks What about the wildlife too. There is many wildlife around nesting and foxes roaming which is part of natural habitat. Animals will be run over and left in the roadside. Why destroy a peaceful environment for many families to enjoy. Just because 'you' want to get to work or town easier, without considering the potential risks this road will cause.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The approved scheme which relocates the bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north towards Hardings Pits is maintained. Apart from the relocation of fencing, there are no proposed works in the immediate vicinity of Hardings Pit that would affect the green space and wildlife. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal.</p>	01 June 2018
68)	Resident 56	<p><b>Consultee Comment</b> Writes as a resident of Friars area to formally register objection and protest against the opening up of Hardings Pits and Hardings Way to traffic, construction traffic or new housing. Says this safe route to school is vital to the community and an essential cycle and walking route into town from South Lynn. Would like his/her voice added to the many from this area who are raising formal objections and would also like acknowledgement of receipt of this email.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. The proposed Traffic Regulation Order does not relate to any housing proposal. The planning permission to which the proposed amendment refers, is for three new accesses along Hardings Way and relocation of a bus gate. What those accesses may serve in the future has not been identified as part of this process, and should any applications come forward in the future, they will be dealt with by the Local Planning Authority (King's Lynn and West Norfolk Borough Council) through the approve planning process in the normal manner.</p>	21 May 2018
69)	Resident 57	<p><b>Consultee Comment</b> Would like to register objection to the proposed works involving Hardings way which is currently used as a bus/cycle route. Says the proposed schemes are going to put children at risk when walking to and from school and do little, if anything to assist the flow of traffic in and around King's Lynn. There are precious few places where pedestrians can walk safely away from the ever encroaching traffic and objects in the strongest way possible to the proposal which allows the original promises made concerning this route to be broken. As a motorist who knows the traffic situation in King's Lynn only too well, still object to the changes proposed to this bus/cycle route. Leave well alone and start to acknowledge that the world does not revolve purely and exclusively around the needs of the motorist. Says use the bus lane for buses only and implement an efficient and well funded park and ride system. Again, objects to the proposals which will have a negative impact on the lives of so many who value and appreciate what is already in place.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility.</p>	21 May 2018
70)	Resident 58	<p><b>Consultee Comment</b> Objects to any plans to reopen Hardings Way to motor traffic. Says this road forms part of an essential pedestrian and cycle route into the town. The presence of motor traffic would cause increased pollution and noise.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving.</p>	21 May 2018
71)	Resident 59	<p><b>Consultee Comment</b> States that in times where we are trying to encourage people of all ages to take exercise it would not be very responsible of the council to take away a safe cycle and walking route. Often use this route walking and cycling, hence avoiding the main road. Is of age 67 so says this route is very important to him/her and others. Therefore, strongly objects to the opening of Hardings Way South to any additional traffic.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility.</p>	22 May 2018
		<p><b>Consultee Comment</b> Wishes to object to the above traffic order on the following grounds: 1) It is unnecessary in that the existing order already allows for 'Access' and there are no plans that the section of Hardings Way in question would ever be used for other than access to the Overton's site and a future housing project on the site known locally as Winfarthing Wood (although it is listed on King's Lynn &amp; West Norfolk Borough Council's list of potential housing sites there are no current plans for it's development). 2) Allowing HGV's to use the route to access the Overton's site will pose an unacceptable risk to the large numbers of cyclists and other vulnerable users who currently use this busy route linking South Lynn and King's Lynn town centre as well as local schools. It should be noted that Hardings Way was originally opened in 2004 as a footway/cycleway with funding from the Sustrans led 'Safe Routes to School' scheme. This will significantly reduce the safety of the route.</p>	

72)	Resident 60	<p><b>NCC Officer Comments</b> The existing Traffic Regulation Order (TRO) does not allow for general traffic (except buses and cycles) to enter Hardings Way from Wisbech Road or 64 metres south of its junction with Boal Street. The proposed amendment to this TRO will allow for accesses to serve land adjoining the southern end of Hardings Way. The proposed amendment to the TRO is to allow all traffic to gain vehicular access to the three new accesses approved the LPA. There are no proposals for housing projects associated to this TRO. Should proposals to develop land utilising the approved accesses at the southern end of Hardings Way come forward in the future, they will be subject to obtaining the necessary planning approvals through the approved planning process. The Safer and Healthier Journeys to School (SHJTS) initiative identified many routes across the County that assisted in removing risks to pupils, parents and carers accessing schools by non-motorised means. The initiative ran between the mid 1990's to the early 2000's when funding for the initiative stopped. Although the emphasis of what the SHJTS initiative intended to achieve remains, the financial support does not. However, amendment of the existing TRO should not have a detrimental effect on those choosing to continue to use Hardings Way as a safe route. The existing shared use facility on the west side of Hardings Way will remain in place, although there will be a singular access crossing it. There will also be a second shared use facility provided on the east side of Hardings Way. Furthermore, as any proposed development comes forward adjacent to the southern end of Hardings Way, a major plank in the planning approval process is to ensure that the proposed development should be both safe and sustainable, which would include how non-motorised users can access and make use of the existing highway network. The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Harding's Way. However, it is only likely to have a significant detrimental impact on disabled pedestrians – specifically blind and visually impaired people, people with multi-sensory impairments (e.g. people who are blind and deaf), and people with mobility impairments. This may include older people, who may not consider themselves disabled, but whom have age-related health conditions or mobility issues that affect their ability to get about. Recommendations are made in the EQA report for amendments to the design to lessen the impact for consideration by the Committee. 18. These accessibility considerations will make it comparatively easier to use the proposed crossing point than many others in the area. This is important to note, because in order to arrive at Harding's Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Harding's Way.</p>	22 May 2018
73)	Resident 61	<p><b>Consultee Comment</b> Wishes to register strong objection to any proposals to change the safe area of Hardings Way by building new roads in that area. Is a resident of King's Lynn who enjoys walking, running and cycling in safe quiet areas of the town. Feels unsafe travelling on busy roads either cycling or on foot and would not wish to lose such a beautiful peaceful area where can keep fit and not breathe in vehicle exhaust fumes.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving.</p>	23 May 2018
74)	Resident 62	<p><b>Consultee Comment</b> Wishes to OBJECT to any lifting of restrictions on motor vehicles accessing the road on the following grounds: As does not own a car usual route from South Lynn into town is via Harding's Way, usually cycling, more occasionally walking, and regards the proposals will prejudice their safety if implemented. There are droves of children safely using the road to access Whitefriars School by cycle or by foot. They would be in future be in conflict with HGVs and the situation would sooner or later result in a fatality. It is likely that parents would opt for the 'safe option' to take them by car and therefore increase the congestion and pollution in the town. Anyone who goes on Harding's Way late morning or early evening will see that the route is favoured by a lot of disability buggy users. To their knowledge, there is at least one blind person who uses it as a much less scary option into town than walking along London Road. As far as he is aware no Disability Assessment has been made on the proposals. This is unacceptable. Says as you will know, a recent official report on air pollution pointed out that many small towns have as high levels of pollution as London and Manchester. One of the ways this should be tackled is to encourage people to walk, cycle, and to use public transport. Obviously the proposals would deter people using all three methods: the buses which now enjoy a traffic free road would be in competition with other motor vehicles and no longer enjoy priority. Take a look at Madrid, Amsterdam and Copenhagen to see how congestion and pollution can be successfully tackled. Although Winfarthing Wood off of Harding's Way south is marked for potential development, there are no definite plans to build at the moment. So asks why is this Traffic Order needed at this time? The other use would be for HGVs to assess Overton's site, but where is the logic of allowing them to cross the paths of such a safe route for walkers and cyclists rather than accessing the site from Wisbech Road. Finally, states this road is part of National Cycle Route 1. What is being proposed would be a big disincentive to tourists visiting by cycle. Nowhere else in the country have similar proposals been accepted and it would set a bad precedent. The nearest proposals to these previously were in Bristol where they were only withdrawn after Sustrans started court action against the Council.</p> <p><b>NCC Officer Comments</b> An independent Equality Impact Assessment (EQA) has been undertaken and is submitted with this Committee report as part of Norfolk County Council's duties under the Equality Act 2010. If the proposal goes ahead, it will affect all current users of Harding's Way. However, it is only likely to have a significant detrimental impact on disabled pedestrians – specifically blind and visually impaired people, people with multi-sensory impairments (e.g. people who are blind and deaf), and people with mobility impairments. This may include older people, who may not consider themselves disabled, but whom have age-related health conditions or mobility issues that affect their ability to get about. Recommendations are made in the EQA report for amendments to the design to lessen the impact for consideration by the Committee. 18. These accessibility considerations will make it comparatively easier to use the proposed crossing point than many others in the area. This is important to note, because in order to arrive at Harding's Way, many (but not all) users will have already had to cross at least one other crossing, indicating some level of confidence in navigating road crossings between their home and Harding's Way. The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility. Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving.</p>	25 May 2018
75)	Resident 63	<p><b>Consultee Comment</b> States this is an OBJECTION. Says 'you like to play stupid word games with people's lives by not recognising a complaint unless OBJECTION is clearly marked. So here is an OBJECTION': says will be imprisoned in home, the Quaker Meeting House flat, if this road is opened and used as planned. The air will be polluted, the noise awful, so windows will have to remain closed all the time. Thank you very much indeed. Adds, have mental health problems, and silence and fresh air are very important. Cried when heard of these plans. Asks why is there all the obfuscation around details, and the truth of what is planned? Please, I beg you, don't do this. The buses on that route are nuisance enough.</p> <p><b>NCC Officer Comments</b> Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. 76)	Resident 64	<p><b>Consultee Comment</b> Objects to National Cycle Route 1 (Hardings Way Road) in King's Lynn being Changed Back to an All Traffic Road. Objects to change any part of Hardings Way Road in King's Lynn, Norfolk Back into an all traffic road is for the same reason why it was changed to a "Bus and Bicycle Road Only" in the place that of "The air pollution was very high and getting higher". Says the main reason why the Council Leader Brian Long and the Council wants to change this road is to build hundreds of more houses and hundreds of more flats around this road in their downtown area. More housing by this road will mean even more air pollution at this Road, than the high air pollution they had at the time the road was changed to a Bus and Bicycle Road Only Road. Now with more housing there will be hundreds more cars using this road of Hardings Way from the new housing. Adds, here in King's Lynn, Norfolk, England has NOW traffic problems and air pollution problems on the roads in the downtown. Asks how do you think we can solve the traffic problems and at the same time keeping pollution, climate change, global warming DOWN? Changing this road back to an all traffic road won't solve the high traffic of air pollution and the high traffic problems we now have and the increase in air pollution and more traffic problems if the new housing is built in the future. The reason why King's Lynn is having increase in air pollution and traffic problems now is that the Council is building housing in the wrong places and doesn't Look at the infrastructure that is needed for housing and what problems does building housing causes. Now Council Leader Brian Long and the Council wants to turn this road back into a road for all traffic, when Council Leader Brian Long in 2014 when he was Deputy Leader and the Council was concerned about the fast growing of the killer of air pollution on this road. Which Council Leader Brian Long when he was Deputy pushed throw the voting to make this road of Harding Way road to a Bus and Bicycle Road. Continues, "You can read this in the Newspaper article below why this road was changed to a Bus and Car Only Road in 2014". EDP Newspaper (Eastern Daily Press, Newspaper) Article 2014: "Air pollution at Dangerous Levels in Parts of King's Lynn, warns Report" Nitrogen dioxide levels in parts of the town are currently High enough to cause a serious risk to health warns a new report. The report to West Norfolk Councillors states: "Air pollution can make our Environment LESS attractive and can have Serious Effects on Health. We are aiming to Reduce Air Pollution to levels that don't cause a risk to human health". Proposals include altering road layouts to improve congestion on busy streets in South Lynn and Gaywood and creating a bus lane from Wisbech Road to Boal Street. Officials say the aim is to encourage more people to park in West Lynn and catch the ferry and residents only parking in town centre streets to discourage commuters from using them for free parking. Brian Long, Deputy Leader of the council said: "The current levels are not good enough, so it's important we do all we can to make King's Lynn a more environmentally friendly place to work and live". County Councillor Alexandra Kemp, who represents South Lynn said: " It is essential we start getting more people to walk to work, to use a bicycle or get the ferry from West-Lynn". Figures produced by Public Health England link 29,000 deaths in the UK each year to air pollution. Other proposals include special traffic controls at main junctions to reduce stop and start driving, improve traffic flow and reduce emissions. A new bus-only lane from Wisbech Road, through the Friars to Boal Street could be used by other vehicles such as taxis. Residents only parking is also being considered in the town centre to encourage visitors and workers to use public car parks, rather than residential streets. Car parking charges will be investigated with the aim of evening out peak travel times while also making short trips easy. Councillors on the Regeneration, Environment and Community Panel discuss the report in 2014. Which Hardings Way "Only Bus and Bicycle Road" was passed by the Council in 2014. Says, the main ways the killing air pollution increases is by us humans. So, why is Council Leader Brian Long and the Council, now changing Harding's Way Road back into a Killing Air Pollution Road in 2018? When in 2014 when Council Leader Brian Long was Deputy Leader "He was concerned more about the killer of pollution on this same road"? Says this does not make sense of what Council Leader Brian Long is doing now. Air pollution in 2014 is the same air pollution now in 2018 and building more housing will increase many times over from what was in 2014. Says the main reason why Council Leader Brian Long and the Council wants to increase the killing of air pollution is to brag to the Head Government that King's Lynn is building more housing of houses and flats (Over 600 more Flats) like the Head Government told them to do, but Council Leader Brian Long is going about it in the wrong way of bring back the killer of air pollution. That building of more houses causes more traffic problems of the killer of air pollution. And building hundreds and hundreds of more houses and flats will not solve the traffic problem we have now. But more housing will add to the traffic problems we have now when the new housing will bring hundreds, hundreds and hundreds of more cars. And it will cost Borough of King's Lynn and West Norfolk thousands of pounds more to change the road back into an air polluting road, which the Council doesn't have any money to this, when there are many cuts in Transport, NHS, Education, etc., etc., etc. Requests 'Can You Please Stop the Planning Permission for this A1 part of Hardings Way Road in King's Lynn, Norfolk and other Changes to Hardings Way Road. Can you please Also check out where this Road is in Our Downtown Area and where the Hundreds and Hundreds of Houses and Hundreds and Hundreds of Flats and Houses going to be Built in Our Downtown King's Lynn by this Road of Hardings Way Road'. Says their downtown is too small for more housing to be built and an increase of more transport from these new houses, which will make much more AIR POLLUTION. " But most of All: Air Pollution Kills." Wants to Thank for all the help that will be given to above matter. Adds, Any questions you may have, just email me back.</p>	05 June 2018

		<p><b>NCC Officer Comments</b> Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving. The proposed Traffic Regulation Order does not relate to any housing proposal. The planning permission to which the proposed amendment refers, is for three new accesses along Hardings Way and relocation of a bus gate. What those accesses may serve in the future has not been identified as part of this process, and should any applications come forward in the future, they will be dealt with by the Local Planning Authority (King's Lynn and West Norfolk Borough Council) through the approve planning process in the normal manner.</p>	
77)	Resident 65	<p><b>Consultee Comment</b> States, several months ago submitted an objection to the plans to open Hardings Way in South Lynn to traffic however have been advised that objections may need to be made again. Hope all the previous objections will be included and not discarded. Regularly cycles along this road and along the riverside. This area is unspoilt and a natural beauty spot and very important to residents and visitors. Objects to this area being opened to traffic as it will introduce pollution, noise and risks to anyone not in a car. There is already a shortage of green space for residents and with the hundreds of new properties that have been built and are planned to be built in South Lynn this road should remain closed as a safe route for pedestrians and cyclists to go to school, work, shops and for play and leisure time.</p> <p><b>NCC Officer Comments</b> Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving.</p>	07 June 2018
78)	Resident 66	<p><b>Consultee Comment</b> Writes to say that strongly objects to the opening up of Harding's Way South to traffic. Either walks or cycles this route on a regular basis to work in King's Lynn. It is currently a safe route for both pedestrians and cyclists but holds an opinion that opening the way up to traffic would mean that it would no longer be a safe route to work. Also, says it is a pleasant green open space, more traffic would mean greater air pollution. Does not want to have to 'battle traffic' and pollution on commute. Adds, governments north national and local are trying to promote exercise and encourage more people to give up their cars. Opening the route would, believes send out the opposite message. Therefore objects most strongly to the opening of Harding's Way South to additional traffic.</p> <p><b>NCC Officer Comments</b> Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Although, the proposal will increase the level of traffic on the southernmost end of Hardings Way, the overall volume will remain relatively low. On this basis, and data from the Borough Council, there is minimal risk of Harding's Way exceeding Department of Environment, Food and Rural Affairs (DEFRA) targets for safe air quality. Also, the air quality monitoring on London Road shows that air quality at this location is currently within the target levels set by DEFRA and improving. The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The approved scheme which relocates the bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north towards Hardings Pits is maintained. Apart from the relocation of fencing, there are no proposed works in the immediate vicinity of Hardings Pit that would affect the green space and wildlife. Also, while assessing the potential impact on trees/ecology and landscape, both District Tree/Landscape Officer and NCC's Natural Environment Team provided no objections/comments regarding the proposal. Hence, any impact should be minimal. The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility.</p>	08 June 2018
79)	Resident 67	<p><b>Consultee Comment</b> Objects to the above and says so do all the local residents who have had recent meetings with councillors. The STO will increase pollution, cause reduced opportunities for pedestrians, especially all the local school children who will have to be taken to school in cars, which adds to the pollution, as well as the benefits of the whole area to the town being lost. These plans seem poorly thought out and very destructive to the local economy and environment. States the reasons put here are only the tip of the iceberg and there are many others, but also object to the lack of proper consultation there has been over this with local people.</p> <p><b>NCC Officer Comments</b> Data from King's Lynn and West Norfolk Borough Council indicates that current levels of nitrogen dioxide are significantly lower on Harding's Way than those on London Road and have been falling. There are well below current DEFRA targets. The view of King's Lynn and West Norfolk Borough Council and those from County Council traffic planners suggests that if the proposal goes ahead, increases in traffic following the change would be small and not increase pollution levels significantly. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility.</p>	08 June 2018
80)	Resident 68	<p><b>Consultee Comment</b> Writes to object to the proposed opening of Harding's Way South to heavy goods and other traffic. Says this is, at present a peaceful and pleasant route, much used for recreation, pedestrians and cyclists. Its relative safety and calm contributes to the area and helps to keep the users of all generations safe. As the owners of a house in Friar's Street, greatly appreciate access to the recreational areas nearby and the ability to stroll along the route in question safely. Uses it regularly and have taken grandchildren, and lead group walks along, there knowing that the risks from traffic are minimal.</p> <p><b>NCC Officer Comments</b> The proposal has been independently audited by Road Safety Officers in July 2017. The audit considered the three year accident data and the final design plans with a site visit to observe vehicle and pedestrian movements. Recommendations were made to redress issues in favour of vulnerable road users, and raise the priority of pedestrians and cyclists over motor vehicles on the shared use facility.</p>	11 June 2018
<b>TRO Preliminary Consultation Objections</b>			
<b>No.</b>	<b>From</b>	<b>Comments</b>	<b>Date Received</b>
		<p><b>1.1 Consultee Comment</b> Objects, as the local County Councillor, to the proposed Traffic Order, on the grounds of its direct impact on the highway and on the green spaces in Lynn, on Roydon Common, and the North Norfolk area of Outstanding Natural Beauty (AONB).</p> <p><b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. Therefore, any impact should be minimal.</p> <p><b>1.2 Consultee Comment</b> The Traffic Order would, in the words of the planning permission, facilitate residential development, i.e. 3 housing estates, on the 3 proposed accesses, and place general traffic at the southern end of Hardings Way. This traffic would compete with the stream of traffic on Wisbech Road.</p> <p><b>NCC Officer Comments</b> As instructed by the BCKLWN, designed two accesses for residential use only and the third access is residential into the northern site, but enabling for HGVs into the existing Overton's site. This scheme is for accesses only, the only access which will generate traffic as part of this scheme is the existing Overton's site which currently exits onto Wisbech Road anyway. If an application for the land use is progressed the highway authority will consider the impact on the current highway infrastructure.</p> <p><b>1.3 Consultee Comment</b> County Highways forgets that the Saddlebow Road Bus Gate had to be built to stop historic gridlock in South Lynn from the Saddlebow Interchange.</p> <p><b>NCC Officer Comments</b> Cannot comment in relation to this TRO.</p> <p><b>1.4 Consultee Comment</b> Traffic routed into South Lynn from Hardings Way would create gridlock again on Wisbech Road, with dangerous back-up at the Southgates Roundabout, a key accident zone.</p> <p><b>NCC Officer Comments</b> After consulting with Overtons, the expected flow of traffic has been estimated to be about 6 HGVs and 10-15 van sized vehicles a week, these movement currently occur onto Wisbech Road so there will be no overall change.</p> <p><b>1.5 Consultee Comment</b> County Highways has not taken into account that this Division has the second highest number of Road Traffic Accidents in the whole of Norfolk and that the introduction of general traffic on Hardings Way would also create at least 3 conflict points with cyclists on National Cycle Route 1, which runs through Hardings Way.</p> <p><b>NCC Officer Comments</b> The design meets all national design requirements, including Manual for Streets and current best practice, such as general principles from the London Cycle Design Standards. It has also been subject to safety audit and has actioned all items raised through the process.</p> <p><b>1.5.1 Consultee Comment</b> Therefore this Traffic Order is downright dangerous, as the attached plan also shows the proposed access wide enough for HGV Waste Lorries, who would put vulnerable road users at risk.</p>	

	<p><b>Cllr. Alexandra Kemp</b> County Councillor for Clenchwarton and King's Lynn south alexandra.kemp.cllr@norfolk.gov.uk 07920 286636 / 01553 630329</p>	<p><b>NCC Officer Comments</b> It has been fully assessed in accordance with standard practices and procedures fully taking into account any safety concerns and issues during the planning process. HGV's from Overtons currently access the site via Wisbech Road, the new access will provide safer option than the current layout which is in close proximity to the junction. Any future development will need to cater for future refuse vehicle movements.</p> <p><b>1.6 Consultee Comment</b> County Highways has produced no Vulnerable Users Safety Audit and this Traffic Order will directly place the safety of cyclists, pedestrians and infants walking along the Safe Route to School, at risk, by placing general traffic on Hardings Way and taking away the safety signs that warn this is a bus/cycle lane only.</p> <p><b>NCC Officer Comments</b> The shared use facility on the western side of Harding's Way will have priority over the new vehicular access. A new shared use facility will be included on the eastern side of Harding's Way which will also have priority for the shared use facility over the two accesses and include an informal crossing across Harding's Way just above the northern most access (informal as only buses and cyclists will use Harding's Way at this point). The advanced signs informing that this is a Bus/Cycle Lane will remain, however the 'only' sub-plate will be removed. In addition an 'ahead' sub-plate will be added to the existing gateway signs on Harding's Way.</p> <p><b>1.7 Consultee Comment</b> County Highways needs to take account that the cumulative effect of this Traffic Order, with traffic from the 3 housing estates it facilitates, together with the other 2 housing estates in the Riverfront Plan, will place at least 1,000 vehicles a day on Hardings Way.</p> <p><b>NCC Officer Comments</b> This is not part of this TRO.</p> <p><b>1.8 Consultee Comment</b> County Highways is countermanding its own policy, and the statements of two senior county highways officers, that it is not safe to open up Hardings Way to all traffic even in an emergency.</p> <p><b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only. Implementation of this scheme will not open up the whole of Hardings Way to general traffic as the bus gates at either end will still be in place. The amendment to the existing situation is that the bus gate at the southern end will be moved 15m further north due to the location of one of the development site access points.</p> <p><b>1.9 Consultee Comment</b> County Highways does not appreciate the road cannot be widened safely; especially but not exclusively, on the double blind bend where the road becomes a single track; taking away the footpath, part of Hardings Pits Doorstep Green or a section of the Nar Outfall are not reasonable options.</p> <p><b>NCC Officer Comments</b> This is not part of this TRO.</p> <p><b>2.1 Consultee Comment</b> The County Council's suggestion, as a corollary to this Traffic Order, that opening the whole bus and cycle lane to all traffic could solve air quality problems in London Road is quite mistaken; this Traffic Order would create instead congestion by placing cars onto narrow streets in the historic heart of Lynn :-</p> <p><b>NCC Officer Comments</b> AS RESPONSE 1.8</p> <p><b>2.1.1 Consultee Comment</b> It is against Government Policy to allow relief roads that take traffic into the centre of towns.</p> <p><b>NCC Officer Comments</b> Not relevant to TRO</p> <p><b>2.1.2 Consultee Comment</b> The prevailing south-westerly winds would blow pollution back over the Friars towards London Road.</p> <p><b>NCC Officer Comments</b> Not relevant to TRO</p> <p><b>2.1.3 Consultee Comment</b> The Borough Council's Air Quality Action Plan says that the Air Quality Management Area. emission exceedances are, in fact, caused by large Transport vehicles and the One-Way System. County should be stopping heavy lorries passing through the town centre and providing a Park-and-Ride to decrease the need for traffic to pass through the South Gates. When I was a child, we referred to the South Gates, not the South Gates, as there are two. The smaller western gate, now blocked up, was reserved for cyclists and pedestrians. This should be restored and would divert traffic fumes away from homes on London Road with better road planning and a dedicated cycle lane.</p> <p><b>NCC Officer Comments</b> Not relevant to TRO</p> <p><b>3.1 Consultee Comment</b> Proper town planning in Lynn has gone out of the window. The County Council has no proper strategy for the provision of green spaces for residents to go with all the new building in Lynn, though the Environment is a key part of its remit. The 900 new homes on NORA will lack the green space they should have - it is noteworthy that the small green park and bandstand built for them is never used as it is beside a busy main road - and the noise and traffic makes it unpalatable to use.</p> <p><b>NCC Officer Comments</b> This is not part of this TRO.</p> <p><b>3.2 Consultee Comment</b> So, this traffic Order by driving traffic though part of Hardings Way will directly affect the amenity of the Doorstep Green. South Lynn is already short of quality green space, and Hardings Way and Harding Pits is the natural recreation area for this area of substantial deprivation.</p> <p><b>NCC Officer Comments</b> The relocated bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north towards Hardings Pits is maintained. The proposal does not push traffic through Harding's Way.</p> <p><b>4 Consultee Comment</b> County is also failing in its Environmental remit by not safeguarding the setting of Hardings Way and Hardings Pits, close to the largest National Nature Reserve, the Wash and the Doorstep Green's diversity of species of birds and butterflies. This failure to do so will place additional pressure on the highway and on the North Norfolk Area of Outstanding Natural Beauty and Roydon Common, as people will take to their cars to be able to walk safely and exercise animals. This could impact on the key County income stream from Tourism.</p> <p><b>NCC Officer Comments</b> AS RESPONSE 1.8 - a representative of the Environment Agency attended our site meeting on 28th June 17 - and had no comment from their perspective.</p> <p><b>5 Consultee Comment</b> County is also ignoring its remit of Public Health, by placing at risk safe and quiet places in neighbourhoods for people to walk and exercise and reduce the risk of obesity and heart disease.</p>	18 October 2017
		<p><b>NCC Officer Comments</b> Through the progression of the scheme we have liaised with the public rights of way officer. As part of the discussions, the Borough Council has agreed to rationalise the current inaccessible FP23 through the Wagg-Jex site should they progress with the development of that site. This will allow pedestrians a better access route. This can encourage more exercise.</p>

	<b>MJ Ray</b> Bicycle Users Group in contact for schemes in King's Lynn and West Norfolk area	<b>Consultee Comment</b> Objects to the proposed Traffic Order amendment as the planning delegate of the local Cycle nation member group, KLWNBUG, on the grounds that the amendment order would increase danger and the likelihood of danger to persons or other traffic using the road; cause damage to the road and to protective structures around the road; hinder the passage of pedestrians, cyclists and buses; allow vehicular traffic of a kind which is unsuitable having regard to the existing character of the adjoining Harding's Pits Doorstep Green; fail to preserve the character of a road which is specially suitable for use by persons on foot; harm the amenities of the area through which the road runs; and harm the "promoting walking and cycling" action of the Air Quality Action Plan. Believes this proposed amendment is notable in doing the opposite of every single thing that such a Traffic regulation Order is meant to achieve and would probably not be legal. Furthermore, as county council has given repeated assurances during the conversion from cycleway to restricted carriageway that this road would not be opened to through traffic and that did not mean simply traffic between Wisbech Road and Boal Quay but traffic through to any other road, including ones not constructed at that time. Urges the county council to honour its word and decline to make this amendment on moral grounds also. Also added that the report from the 'Get Britain Cycling' APPCG Inquiry states clearly that it found "Heavy Goods vehicles are disproportionately involved in deaths and serious injuries, despite some excellent work by some freight organisations." As such, a traffic order amendment that permits "max legal HGVs" to start using a cycle route between the town centre, a school and a residential area is clearly likely to increase the likelihood of danger to people who currently use that route. At least four new HGV-cycling and three new HGV-walking conflict points would be created, as well as many new car-NMU conflict points. If all the proposed accesses are brought into use with the forecast usage levels, this would amount to many thousands of extra NMU-vehicle interactions every day, some of which are likely to be dangerous. Despite the use of traffic forecast models, there are often unintended and unforeseen consequences of adding new routes to the networks, such as the reports of the new Lynnsport Way attracting dangerous anti-social speeding traffic, according to Cllr Collis. The damage to roads from vehicles is roughly proportional to the weight on each wheel to the fourth power, so a 2 tonne 4-wheel car typically causes about 10,000 times more damage to a road than a 100kg bike and rider on two wheels, while a 30 tonne 18-wheeler HGV might do more than 1 million times the damage. (Estimates from our colleagues at "Cycling in Christchurch"). So it is obvious that opening part of this road to general traffic will accelerate the damage. Hopes it is obvious that increasing private and goods traffic on any route will hinder the passage of buses, cyclists and walkers and that max legal HGVs are unsuitable for the character of the nearby doorstep green and the existing road which is especially suitable for walking and also it reduces their amenity value. Also stated that the forecast extra traffic from the proposed accesses would directly increase pollution and harm air quality in the local area, as well as undermine the air quality action plan task of promoting walking and cycling by adding motor vehicles to part of the cycle route between the still-being-built Nar Ouse Regeneration Area and the town centre. As there are no valid legal grounds to amend the order, urges not to amend it. However, if the order goes ahead, says it must be accompanied by access-only and parking restrictions to prevent the road's use as an ad-hoc free car park that would obstruct bus and cycle traffic. Also urges to make the entire road a 20mph limit (extending the south Lynn 20 mph zone to the South Gates Roundabout, ideally), to add Advanced Stop Boxes at the traffic lights and to correct the bus/cycle signs to add "local" to the bus symbol. Additionally, hopes some funding must have been set aside by somebody for enforcement of the restrictions for them to be worthwhile, even if it is only automated issuing of fines using number-plate-reading cameras. The current non-enforcement of the existing restrictions on the southern section - and even on the whole route when the bollards are stuck down - is nothing short of scandalous and seems like the county council is essentially failing to collect money to which it is entitled. Finally, notes that they have not seen the Vulnerable road Users Audit of the route to confirm what further measures can be taken to safeguard people using this vital piece of green infrastructure and awaits reply with interest, hopefully to confirm that the proposed order will not be made and that long overdue Vulnerable Road Users Audit of the route will finally be carried out with participation of local cycling groups.	02 November 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The proposal will maintain the current buses and cycles only between the bus gates. The shared use facility on the western side of Harding's Way will have priority over the new vehicular access. A new shared use facility will be included on the eastern side of Harding's Way which will also have priority for the shared use facility over the two accesses and include an informal crossing across Harding's Way just above the northern most access (informal as only buses and cyclists will use Harding's Way at this point). Appropriate signs and road markings proposed. It has been fully assessed in accordance with standard practices and procedures fully taking into account any safety concerns and issues during the planning process. One of the accesses in the northern side of Harding's Way has been designed to enable HGVs into the existing Overton's Site as instructed by BCKLWN, who otherwise have already been accessing the site through their current access. Hence, the proposal does not intend to encourage more HGVs to pass through Town Centre but provides additional access to the site, with greater visibility than the current access onto Wisbech Road. Harding's Way at this location is covered by double yellow lines.	
	Equal Lives	No comments.	
	<b>Philip Broadbent-Yale</b> Sustrans Network Development Manager East	<b>Consultee Comment</b> Referred to Riverfront Development Site and stated Sustrans were supposed to be invited to riverfront Stakeholder Group. Requested clarification about TRO's being amended without subsequent meetings/discussions. Also, requested confirmation that the TRO amendments will not be issued until the Riverfront stakeholder Group has considered and reviewed the options.	09 October 2017
		<b>NCC Officer Comments</b> PBK responded back on 10 October 2017 thanking for the clarification and the plans and expressed his interest in attending the Riverfront Stakeholders Group when dates were fixed. He also sent an email to Cllr Kemp on 11 October 2017 attaching the proposed plan stating the TRO is not opening up the whole of Hardings Way and it is just to gain access to the development land at the southern end.	
	<b>Resident 1</b>	<b>Consultee Comment</b> Objects to TRO as it seems to be for the purpose of allowing heavy vehicles on the road and thinks it should not be opened to traffic. Also, objects to lack of consultation over the whole proposal and states ordinary people should be listened to especially in the post Grenfell Tower Era as they are the ones to suffer from plans which offer short term gains for developers who are not going to live near the awful developments they have built.	11 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The expected flow of traffic has been estimated to be 6 HGVs and 10-15 van size vehicles a week from the Overtons site, which currently has access directly on to Wisbech Road. The proposal will maintain the current buses and cycles only between the bus gates. When progressing a proposed TRO, NCC adopt a two-stage process whereby two different consultation stages are utilised. The first stage is referred to as 'preliminary' and involves Statutory consultees only. This stage is used to identify major issues with any proposal that may lead to amendments, before a wider consultation is undertaken with individuals such as residents who may about the proposal or those who have an interest. This part of the process also includes the advertisement on site and in the local paper.	
	<b>Resident 2</b>	<b>Consultee Comment</b> Objects to TRO. Uses Harding's Way to regularly ride and walk to town and believes any change in use would subject individuals to extra danger, noise and pollution. Also, thinks it is unacceptable way to proceed without first notifying all local residents, Whitefriars School and other interested parties of their right to comment or object.	11 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The expected flow of traffic has been estimated to be 6 HGVs and 10-15 van size vehicles a week from the Overtons site, which currently has access directly on to Wisbech Road. The proposal will maintain the current buses and cycles only between the bus gates. This stage is used to identify major issues with any proposal that may lead to amendments, before a wider consultation is undertaken with individuals such as residents who may about the proposal or those who have an interest. This part of the process also includes the advertisement on site and in the local paper.	
	<b>Resident 3</b>	<b>Consultee Comment</b> Objects to the plan to allow more traffic to use Hardings Way. Lives on the road next to Whitefriars and thinks it will create more noise pollution. Also, presumes the rates will go down if it happens.	11 October 2017
		<b>NCC Officer Comments</b> This TRO is for accesses only, and the only traffic generated in this application will be from Overtons. This is not an increase, but allows them to access Wisbech Road via Hardings Way and not directly onto Wisbech Road.	
	<b>Resident 4</b>	<b>Consultee Comment</b> Strongly objects to the repurposing from cycle and bus lane to general traffic being allowed on Harding's Way. Worries about safety of cyclists, pedestrians and residents, increase in pollution and the proximity to local houses and doorstep green. Thinks the proposal is a manoeuvring towards development of the doorstep green and ignores the benefits to local residents of a safe and highly used route to cyclists, dog walkers and pedestrians.	11 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The relocated bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north is maintained. The expected flow of traffic has been estimated to be 6 HGVs and 10-15 van size vehicles a week from the Overtons site, which currently has access directly on to Wisbech Road. The proposal will maintain the current buses and cycles only between the bus gates. In addition, a new shared-use facility will be included on the eastern side of Hardings Way, which along with the existing shared use facility on west, will have priority over the new vehicular accesses. When progressing a proposed TRO, NCC adopt a two-stage process whereby two different consultation stages are utilised. The first stage (where this scheme is currently) is referred to as 'preliminary' and involves Statutory consultees only. This stage is used to identify major issues with any proposal that may lead to amendments, before a wider consultation is undertaken with individuals such as residents who may about the proposal or those who have an interest. This part of the process also includes the advertisement on site and in the local paper.	
	<b>Resident 5</b>	<b>Consultee Comment</b> Expressed disappointment that TRO has not been published and objects to it. States the road is used by lot of local schoolchildren to walk and cycle to school as well as other local residents. Opening it up to all traffic would be very short-sighted.	11 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The proposal will maintain the current buses and cycles only between the bus gates. In addition, a new shared-use facility will be included on the eastern side of Hardings Way, which along with the existing shared use facility on west, will have priority over the new vehicular accesses. This scheme is only looking at the addition of three access on the southern most extent of Hardings Way.	
	<b>Resident 6</b>	<b>Consultee Comment</b> Objects to the proposal as it is endangering children. Area used by children's and adults from all walks of life. Quite place to walk and think will be destroyed if the bus lane is opened to the traffic and also wildlife in the area would be damaged. Suggests to make King's Lynn one way traffic and put in park and ride.	11 October 2017

In addition, a new shared-use facility will be included on the eastern side of Hardings Way, which along with the existing shared use facility on west, will have priority over the new vehicular accesses.	

	Resident 8	<b>Consultee Comment</b> Objects to the TRO as it imposes safety risks to cyclists and children. The meadows surrounding the road were designed to conserve and protect wildlife as well as being a pleasant environment and green space for residents to enjoy. Does not want added noise pollution diverted from the main road.	11 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. In addition, a new shared-use facility will be included on the eastern side of Hardings Way, which along with the existing shared use facility on west, will have priority over the new vehicular accesses.	
	Resident 9	<b>Consultee Comment</b> As a new resident in King's Lynn, objects to the proposal as it is safe route for pedestrians, cyclists to access the town centre and a quiet route for children attending Whitefriars School. Believes the original costs were funded from some social project who would be entitled to claim their money back if the road is not used for the original purpose. Thinks the whole scheme is a vanity project by the leader of KL&WNDC and would only add to the chaotic traffic system in the town.	11 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. In addition, a new shared-use facility will be included on the eastern side of Hardings Way, which along with the existing shared use facility on west, will have priority over the new vehicular accesses.	
	Resident 11	<b>Consultee Comment</b> Thinks it is wrong if Harding's Way is opened to cars as it is the safest route to Whitefriars for children (her 2 young children attends the school as well). Stated it is less stressful not worrying about cars and her children going too close to the road. Also, believes that buses have now learnt to slow down when they know it is opening and closing time of the school.	11 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. In addition, a new shared-use facility will be included on the eastern side of Hardings Way, which along with the existing shared use facility on west, will have priority over the new vehicular accesses.	
	Resident 13	<b>Consultee Comment</b> Expressed disappointment at the potential loss of Harding's Way in King's Lynn as a peaceful and safe way for walkers & cyclists to get into town and back. Not only that but also cannot understand the reasoning behind destroying one of King's Lynn greatest tourist attractions - the view of the river and the walks alongside it. Added it would be lost if the proposal goes through. Questioned why the council intends on destroying areas used by normal, local people. PS does not expect answer for this as the council just seems to get away with it all the time.	11 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The relocated bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north is maintained. In addition, a new shared-use facility will be included on the eastern side of Hardings Way, which along with the existing shared use facility on west, will have priority over the new vehicular accesses.	
	Resident 14	<b>Consultee Comment</b> As a local resident, objects very strongly to Harding's Way opening to general traffic as many local children use this route to get to and from school and I am concerned that increased traffic will be dangerous in terms of accidents and air quality. Feels that the welfare of local children should be treated with the utmost importance. Enjoys the opportunity to use Harding's Way as a pleasant leisure environment along with other local residents and feels that increased traffic will reduce community's quality of life. Thinks it will be a terrible shame if the recent improvements to the area, particularly the work carried out by Free bridge, are spoiled by more traffic.	11 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The proposal will maintain the current buses and cycles only between the bus gates. In addition, a new shared-use facility will be included on the eastern side of Hardings Way, which along with the existing shared use facility on west, will have priority over the new vehicular accesses.	
	Resident 15	<b>Consultee Comment</b> Understands that there is now a short consultation period regarding re-designing the Harding's Way cycle and bus route for general traffic. Usually cycles to get around Kings Lynn and thinks King's Lynn is a delight to cycle and would hate to see this primary and very safe route become as dangerous as other roads. Further understands that local residents, local schools and other obvious outlets have not been informed which does not seem very democratic. Wants to register his dissent and disapproval and requests for reconsideration regarding the approach to local democracy.	11 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The relocated bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north is maintained. This stage is used to identify major issues with any proposal that may lead to amendments, before a wider consultation is undertaken with individuals such as residents who may be affected by the proposal or those who have an interest.	
	Resident 16	<b>Consultee Comment</b> Had just been informed about the hasty consultation to open up "Harding's Way" in King's Lynn to traffic. Objects. Stated that strategies should be based on reducing the incursion combustion engines into every aspect of lives, not accommodating their insatiable demand for space to move freely some danger and pollution. Disappointed but NOT surprised NCC hasn't quite got it's head around climate change yet.	11 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The relocated bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north is maintained. The expected flow of traffic has been estimated to be 6 HGVs and 10-15 van size vehicles a week from the Overtons site, which currently has access directly on to Wisbech Road. In addition, a new shared-use facility will be included on the eastern side of Hardings Way, which along with the existing shared use facility on west, will have priority over the new vehicular accesses.	
	Resident 17	<b>Consultee Comment</b> Discovered that it is NCC's intention to start a 21 day consultation on the TO open Harding's Way to vehicular traffic. As a South Lynn resident, concerned that no public notification of this has been made known to people and organisations which may have objections to this scheme. Stated there is strong public opposition to this proposal and not only will it increase noise pollution for those who live nearby but also will put children who uses this route at risk to get to and from Whitefriars School. Added that when the initial consultation for building the Harding's Way bus lane was being held in South Lynn, he raised concern that it was the thin end of the wedge to getting a road built which would ultimately be used for all vehicles. The consultants stated categorically that this would not happen. Thinks placing an unsound scheme in an area which is tranquil and safe for those who walk or cycle in and out of town, will do nothing to alleviate the traffic problems in town and once done will be very difficult to undo when it is proven to be ineffective. Added this has not been made clear to those who will be affected.	11 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The relocated bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north is maintained. The expected flow of traffic has been estimated to be 6 HGVs and 10-15 van size vehicles a week from the Overtons site, which currently has access directly on to Wisbech Road. 	Resident 18	<b>Consultee Comment</b> Would like to protest in the strongest possible terms to the way the consultation on the 'Traffic Order' to open 'Harding's Way' to general traffic have been initiated. Accuses of not following official procedures of informing the concerned parties of the implementation of the consultation nor of their right to comment or object to the proposal. Thinks the whole issues has been dealt with in a surreptitious manner leading to believe that the council is trying to push the issue forward at any cost and against the wishes of the local people who voted them in. Have spoken to Long about this and received reply in a rude manner. Therefore, is totally opposed to opening 'Hardings Way' to general Traffic and will do all in his power to stop this.	11 October 2017
		<b>NCC Officer Comments</b> When progressing a proposed TRO, NCC adopt a two-stage process whereby two different consultation stages are utilised. The first stage (where this scheme is currently) is referred to as 'preliminary' and involves Statutory consultees only. This stage is used to identify major issues with any proposal that may lead to amendments, before a wider consultation is undertaken with individuals such as residents who may about the proposal or those who have an interest.	
	Resident 19	<b>Consultee Comment</b> Understands that NCC is starting a consultation on the Traffic Order to open up Harding's Way in King's Lynn to traffic other than bicycles and buses and wishes to object it. Added, the road is currently used as a Safe Route to School by many pupils at Whitefriars Primary Academy, opening it to more traffic would increase the likelihood of accidents and as the dangers of using the road increases, it would lead to an increase in children being driven to school by anxious parents. Creating a supposedly faster route to the school will lead to some parents parking on the pavements along Harding's Way or stopping illegally in the carriageway to offload their children. Some already ignore the yellow zigzags and huge sign outside the school. More children being driven to school will not help efforts to encourage physical activity to combat childhood obesity. There will be an increase in noise and air pollution which will affect the quiet environment of the school and the natural environment in and around it. Lastly, Harding's Way and Harding's Pit are widely used by members of the school community outside school hours for exercise, walking, running, cycling, picking blackberries, birdwatching and enjoying the tranquil environment. Opening this road will create an environment more like London Road than a green open space.	11 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The relocated bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north is maintained. The expected flow of traffic has been estimated to be 6 HGVs and 10-15 van size vehicles a week from the Overtons site, which currently has access directly on to Wisbech Road. 	Resident 20	<b>Consultee Comment</b> Believes there is an order regarding opening up Harding's to general traffic and queries why residents who will be affected have not been notified. Objects to this order on the grounds that it will not solve congestion, pollute a beautiful part of King's Lynn effecting wildlife and resident's health and increase the noise level significantly for residents. Suggests an alternative that would help King's Lynn and its residents would be to create Park-n-ride which would create jobs, reduce toxin gas emissions, reduce the parking problem for residents and keep King's Lynn within the government guidelines for vehicles emissions. Also included few paragraphs about Air Pollution and International & European standards of air quality from Government's own site.	12 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The relocated bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north is maintained. This stage is used to identify major issues with any proposal that may lead to amendments, before a wider consultation is undertaken with individuals such as residents who may about the proposal or those who have an interest.	
	Resident 21	<b>Consultee Comment</b> Objects to the above being open to traffic as it is a haven for wild life and a great place for a walk at the moment. Suggests to check Harding's Way personally which needs to get up from behind the desk and make a visit to Hardings Way and take note of the wild life and walkers.	13 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The relocated bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north is maintained. The expected flow of traffic has been estimated to be 6 HGVs and 10-15 van size vehicles a week from the Overtons site, which currently has access directly on to Wisbech Road. The proposal will maintain the current buses and cycles only between the bus gates. In addition, a new shared-use facility will be included on the eastern side of Hardings Way, which along with the existing shared use facility on west, will have priority over the new vehicular accesses.	
	Resident 22	<b>Consultee Comment</b> Surprised to learn that NCC are instigating a 21 day consultation on the Traffic Order to open up Hardings Way in Kings Lynn to other traffic without notifying local residents and all other interested organisations who have right to participate and are directly affected. Questions why representation from King's Lynn are barred from giving their objection to the order. Added the main objections stem from the obvious increase in vehicular traffic which the Order will permit, merely moving the pollution from London Road to Hardings Way. Hardings Way offers tranquillity and relief from traffic noise and pollution. it is a haven for wildlife which would largely disappear with the advent of more traffic. Stated that when Hardings Way was first conceived, Whitefriars School was given the promise that the route would be a safe passage to and from school without threat of heavy traffic, asks what has happened to this promise. Requests to think again about the proposal to which they strongly object as they, residents of South Lynn, values the wonderful place.	13 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The relocated bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north is maintained. The proposal will maintain the current buses and cycles only between the bus gates. In addition, a new shared-use facility will be included on the eastern side of Hardings Way, which along with the existing shared use facility on west, will have priority over the new vehicular accesses. When progressing a proposed TRO, NCC adopt a two-stage process whereby two different consultation stages are utilised. The first stage (where this scheme is currently) is referred to as 'preliminary' and involves Statutory consultees only. This stage is used to identify major issues with any proposal that may lead to amendments, before a wider consultation is undertaken with individuals such as residents who may about the proposal or those who have an interest.	
	Resident 23	<b>Consultee Comment</b> Just learned about the consultation from someone and is surprised to not have received notification of this form from the NCC as believes to be a 'Stakeholder'. Suggests notices could be put up along Harding's Way, if letters are too expensive, so that people can be made aware of it. Requests for the link to the consultation.	14 October 2017

	Resident 25	<b>Consultee Comment</b> Have been out for lovely walks with her little dog Billy over to Harding's Pitts and in just an hour met at least 10 other people walking their dogs along with about 7 youngsters riding their bicycles on their own not as a group between age of 7 to 10 years and also about 20 adults riding their bicycles. All within 1 hour on a late Sunday afternoon. Added, Harding's Pitt is used so much and wishes the name could be changed to something like Hardings Park/Walks as Pitts sound like rubbish which it is not.	15 October 2017

	Resident 26	<b>Consultee Comment</b> Stated he was having difficulty in finding the details of the proposed Traffic Order regarding Hardings Way, in King's Lynn. Asked for advise in finding the details of the order and queries if it might be possible to give his thoughts.	17 October 2017
		<b>NCC Officer Comments</b> When progressing a proposed TRO, NCC adopt a two-stage process whereby two different consultation stages are utilised. 	Resident 27	<b>Consultee Comment</b> Wished to state her objection to this Traffic Order as she loves to cycle around the Harding's Pit and believes it should be maintained as a safe area for pedestrians and cyclists.	17 October 2017

In addition, a new shared-use facility will be included on the eastern side of Hardings Way, which along with the existing shared use facility on west, will have priority over the new vehicular accesses.	

	Resident 28	<b>Consultee Comment</b> Strongly objects to the proposal regrading traffic using the bus lane across Hardings pits. Stated he was totally against the bus lane and hates to watch out for them when out walking dog in the pits and along the riverbank. Thinks normal traffic will increase pollution in this area and will make it more dangerous for cyclists and school children. Requests not to let it happen. Added, when Harding's Pit was first created it was lovely area to walk in the open air but now it is getting more like London Road.	17 October 2017

	Resident 29	<b>Consultee Comment</b> Wants to lodge the concern of CPRE Norfolk in regards to the proposed amendments to the TRO affecting Harding's Way in King's Lynn. Concerned that this will detract from current enjoyment of the open nature of some of the surrounding land, by permitting more and heavier use through provision of the three new access points and moving of the bus gate. Have safety concerns especially regarding the TRO due to the current usage by pedestrians and cyclists, in particular but not exclusive to those children using this as a route to and from school. Believes this use will be affected through the additional traffic - presumably of heavy vehicles which will result from provision of the new accesses. Have also attached objection to King's Lynn and West Norfolk Borough Council which contains further details of their concern over the road usage.	18 October 2017

In addition, a new shared-use facility will be included on the eastern side of Hardings Way, which along with the existing shared use facility on west, will have priority over the new vehicular accesses.	
	Resident 30	<b>Consultee Comment</b> Objects to the traffic order for the building of three new roads off Harding's Way which will open southern end of Harding's Way to motor traffic. Reminds the cycle and bus route was put in across Harding's Pits which is a nature reserve and much loved by the local residents and also that it was promised at that time that the road would not be opened for general traffic which would destroy the whole concept of the nature reserve.	18 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. 	Resident 32	<b>Consultee Comment</b> Objects to the TRO to open Harding's Way. Often bikes along the road and spend time in the area of Harding's Pit/Doorstep Green. Stated the road is part of National cycle route 1 and a safe area of tranquillity and nature with huge historical value to the town with wonderful scenery. Allowing additional traffic will introduce risks of accidents, pollution and noise and will be detrimental to the hundreds of people who use it either as part of their daily life, walking and cycling to work, schools and shops, and those including visitors to the town who use it as pleasure. Added there is a lot of speculation and worry among residents and about the future plans by Borough Council for this area in terms of development and building housing estates. Believes this consultation cannot be properly commented on until everything is out and in the open with future plans included which NNC and BC should be aware of and should be declared prior to the consultation. Furthermore, have not seen any of the details advertised anywhere and believes that many people are not even aware of it. Thinks the consultation should be halted until all the facts are provided by NCC and the BCC so that people are able to understand what is happening before they can make their comments either for or against the proposal.	19 October 2017

	Resident 33	<b>Consultee Comment</b> Strongly objects to the proposal which is out for public consultation. Understands that the only part of Harding's Way is affected by this proposal however, this short section is used by walkers and cyclists including children going to and from school. Like the rest of Harding's Way, believes the pleasant tranquil route will be completely spoiled by vehicular traffic, particularly heavy lorries likely to be used for the development of the nearby areas of land. Added, it will spoil people's enjoyment of the peace and quiet of Harding's Pits, a door-step green much loved by residents in this area. Is sure that the development of the land nearby can be achieved without this extreme measure.	20 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. 	Resident 34	<b>Consultee Comment</b> Instructed by Natural England in relation to the Millennium and Doorstep Green initiative. On 9 September 2004, Natural England in conjunction with the Big Lottery Fund (the fund), provided grant support to King's Lynn and West Norfolk Council to establish Hardings Pits as a Doorstep Green. The agreements terms and conditions and deed of covenant associated with this grant placed obligations on the grant recipient for 25 years and further obligations to maintain the green and to keep it available to the local community as area for the community enjoyment in perpetuity. Natural England is required by the Fund to ensure these obligations to be delivered and therefore retains an interest in the Green. Recently been informed that an amendment to a Traffic Regulation Order is proposed in respect of Hardings Way to allow this road to be used by general traffic, as opposed to its current limited use and as Hardings Way is adjacent to the Green in which Natural England retains an interest, requested for the Natural England to be consulted in case a proposal which affects the Doorstep Green itself is received. This interest is in addition to Natural England being a statutory consultee in planning proposals from its perspective as advisor on the natural environment.	26 October 2017
		<b>NCC Officer Comments</b> The TRO relates to southernmost extent of Hardings Way only which proposes to extend it from the junction of Wisbech Road to the proposed location of the bus gate i.e. 15m north of the existing bus gate location. The relocated bus gate will include amending the fencing to ensure that the security of the land beyond the bus gate to the north is maintained. Fencing/barriers are provided across each access 'stump' too prevent any casual traffic from entering the sites which will also protect access to Hardings Pits. The existing situation between the two bus gates will remain unchanged.	
	Resident 35	<b>Consultee Comment</b> Believes there is an order regarding opening up Harding's to general traffic and queries why residents who will be affected have not been notified. Objects to this order on the grounds that it will not solve congestion, pollute a beautiful part of King's Lynn effecting wildlife and resident's health and increase the noise level significantly for residents. Suggests an alternative that would help King's Lynn and its residents would be to create Park-n-ride which would create jobs, reduce toxin gas emissions, reduce the parking problem for residents and keep King's Lynn within the government guidelines for vehicles emissions. Also included few paragraphs about Air Pollution and International & European standards of air quality from Government's own site.	02 November 2017
